RR 350

Thanks for your preference, and have a good time! This handbook contains the information you need to properly operate and maintain your motorcycle.

The data, specifications and images shown in this manual does not constitute an engagement on the part of BETAMOTOR S.p.A. BETAMOTOR reserves the right to make any changes and improvements to its models at any moment and without notice.
IMPORTANT

We recommend you to check all the tightenings after the first one or two hours’ ride over rough ground. Special attention should be paid to the following parts:

• rear sprocket
• ensure that the footrests are properly fixed
• front/rear brake levers/calipers/discs
• check that the plastics are properly fastened
• engine bolts
• shock absorber bolts/swingarm
• wheel hubs/spokes
• rear frame
• pipe connections
• tensioning the chain

IMPORTANT

For any servicing requirements, please get in contact with Beta-motor’s authorized service network.

OPERATING INSTRUCTIONS

• The vehicle must be accompanied by: number-plate, registration document, tax disk and insurance.
• Any modifications of the engine or other parts are punishable by severe sanctions including the confiscation of the vehicle.
• Do not sit on the vehicle when it is on its stand.
• Do not start the engine in closed places.

WARNING
Any modifications and tampering with the vehicle during the warranty period exempt the manufacturer from all responsibility and invalidate warranty.

ECOLOGIC GUIDE

• Every vehicle powered by an internal combustion engine produces an amount of noise (noise pollution) and gases (air pollution) which varies with the riding style.
• The abatement of noise and air pollution levels is the duty of everybody. Avoid full-throttle starts, sudden acceleration and abrupt braking. This will reduce noise emission as well as the wear and tear of the tyres and mechanical parts, and will also allow a considerable reduction in fuel consumption.
RIDING SAFETY

• Observe the Highway Code.
• Always wear approved personal protective equipment.
• Always ride with the low beam on.
• Always keep the crash helmet visor clean.
• Avoid wearing garments with hanging ends.
• Do not keep sharp or brittle objects in your pockets while riding.
• Properly adjust the rearview mirrors.
• Always ride in a seated position, with both hands on the handlebars and both feet on the footrests.
• Never ride abreast with other vehicles.
• Do not tow and avoid being towed by other vehicles.
• Always keep a safe distance from other vehicles.
• Do not start off while the vehicle is on its stand.
• Avoid swaying and wheelies as they are extremely dangerous for your own and other people’s safety as well as for your vehicle.
• Always apply both brakes on dry roads with no gravel and sand. Using one brake may be dangerous and cause uncontrolled skidding.
• To reduce the braking distance, always apply both brakes.
• On wet roads and in off-road riding, drive with care and at moderate speed. Take special care in applying the brakes.

VEHICLE IDENTIFICATION DATA

FRAME IDENTIFICATION
Frame identification data A are stamped on the right side of the steering head tube.

ENGINE IDENTIFICATION
Engine identification data B are stamped in the area shown in the figure.

TOOLS KIT
The following items are supplied as standard: operation and maintenance manual, tool kit (see photo).
To take the tool kit, remove the saddle 1 (page 64). Pull the rear side panel 2 to remove it and unbind it by the strap of the left mudguard.

Get off the male end wrenches and hexagon socket 3. With these is possible to unscrew the screw 4.

Pull the left cover of rear fender and unhook two rubber band 5. Now the toolkit 6 is accessible.
FAMILIARIZING WITH THE VEHICLE

MAIN PARTS:

1 - Fuel tank
2 - Tank cap
3 - Silencer
4 - Rear shock absorber
5 - Headlight
6 - Rear light
7 - Side stand
8 - Fork
9 - Rider’s footrests
10 - Lower bumper (Bumper kit)
11 - Saddle
12 - Engine
13 - Front mudguard
14 - Number-plate holder
15 - Kick-start
16 - Gear lever
17 - Rear brake lever
18 - Front brake lever
19 - Clutch lever
20 - Throttle
21 - Fork covers
22 - Rear mudguard
23 - Cover air filter
24 - Front indicators
25 - Rear indicators

Fuelling .................................................................................................................................. 27
Starting the engine .............................................................................................................. 27
Engine shut-down ............................................................................................................... 28
MAIN PARTS

CLUTCH LEVER
Clutch lever 1 is fitted to the left-hand side of the handlebars.

LH SWITCH
The dip and service switch is located on the left side of the handlebar and is composed as follows:

1 - Horn button;
2 - Dip switch:
   - off;
   - high beam;
   - low beam;
3 - Shut-down : press the button until the engine stops.
4 - Turn signal light switch: shifting lever 5 left or right activates the left or right indicators. When released, the lever returns to the central position. Press it to turn the indicators off.

STARTER BUTTON
Starter button 1 is located on the right-hand side of the handlebars and operate the electric engine starter. Do not press the button 1 while the engine is running.
FRONT BRAKE LEVER AND GAS CONTROL
The front brake lever A and the gas throttle B are located on the right side of the handlebar.

GEAR CHANGE LEVER
Gear change lever is fitted to the left side of the engine. The positions corresponding to the different gears are shown in the figure.

BRAKE PEDAL
Brake pedal 9 is located in front of the right-hand footrest.

KICKSTART
The kick-starter pedal is located on the right side of the engine. The upper part is rotatable. To start, depress the kick-starter outward and with a quick movement downward. The pedal will automatically return upwards. After starting, manually fold the pedal in the rest position.
SIDE STAND
Press down side stand with the foot and lean the vehicle against it. Ensure that the ground is solid and the vehicle stands steadily.

WARNING!
Warning! Do not climb on the vehicle when the side stand is down.

If the vehicle is used off-road, the closed stand can be further fastened by means of rubber band 8.
KEYS
The vehicle is supplied with two keys (one key and its spare).

STEERING LOCK
To activate the steering lock:
- turn the handlebar counter-clockwise;
- push the key and turn counter-clockwise;
Remove the key from this position.
To deactivate the steering lock:
- turn the key clockwise;
- turn the handlebar clockwise;
From this position, the handlebar is free to move, the key can be removed.

WARNING: do not keep the spare key inside the vehicle, but in a safe place.
We suggest you note the code number stamped on the keys. In this way you can obtain a duplicate.

7 WARNING LIGHTS

1 GENERAL SPECIFICATIONS AND GENERAL INFORMATION

1.1 GENERAL SPECIFICATIONS

SPEED/DISTANCE SENSOR: Non-contact magnetic
DISPLAY MEASUREMENTS: 125mm x 41mm x 34mm
STORAGE TEMPERATURE: -20°C to 80°C (-4°F to 176°F)
BATTERY: 3V CR2032
BATTERY LIFE: Approximately one year
EXTERNAL CURRENT SUPPLY: 12V DC

1.2 GENERAL INFORMATION

Backlight:
The digital speedometer/odometer is backlit to enable reading where there is poor or no lighting.
When using supplied power with the engine on:
• The back-lighting is on permanently when the engine is running.

Using only the internal battery:
• With the LO symbol, the backlighting will not switch on. The \textbf{LO} symbol appears when the battery voltage is lower than 2.45V.

Reset Button:
Using the Reset button, located on the back of the instrument, all travel data will be deleted, including date and time.

Internal battery:
The instrument houses a 3.0V internal button cell battery (CR2032). The instrument can only work with this battery. The \textbf{LO} symbol appears when the battery is running low. To change the battery, unscrew the cap located on the back of the instrument using a coin.

Once the battery has been changed, make sure that the positive side is facing outwards.

REPLACE THE BATTERY WITH ANOTHER CR2032-TYPE BATTERY.

2 SETTING THE PARAMETERS

General information:
Allowed settings:
• Km/h (kilometres per hour) or M/h (Miles per hour)
• Wheel size (rolling circumference) [mm]
• Clock format: 12-hour / 24-hour
• Current date
• Maintenance

TO ENTER THE PARAMETER SETTINGS MODE HOLD DOWN THE RIGHT AND LEFT BUTTONS FOR APPROX. 3s.
THE WORD “Unit” WILL FLASH ON THE DISPLAY.

The operational logic is structured as follows:
• The instrument enters SETUP mode displaying the parameters according to the sequence listed above.
• The instrument displays the parameter to be changed for a few seconds in flash mode.
• If you wish to change the parameter displayed for those few seconds simply edit the values by pressing the right and/or left buttons (according to the modes listed below), otherwise wait a few seconds (approx. 5 s) to proceed to the next parameter.
• When the parameter has been edited to the desired value, the instrument automatically moves onto the next setting, there is no need to press any button of confirmation.
• If you only wish to enter the setup mode to view the configured settings, simply wait without pressing any buttons; the instrument will display all of the set parameters and will then automatically go back to “Normal Mode”.
2.1 SETUP SEQUENCE

Select unit of measure
Wheel size
Clock format
Setting the Time
Maintenance reminder

2.1.1 Selecting the unit of measure (Km/h or M/h):
TO SELECT THE UNIT OF MEASURE (Km/h or M/h), PRESS THE RIGHT OR LEFT BUTTON.
WAIT 5 SECONDS TO PROCEED TO THE NEXT SETTING.
DO NOT PRESS ANY BUTTONS.

2.1.2 Selecting the wheel size (rolling circumference):
The instrument has programmed two rolling circumference measurements for the front wheel: larger size (ENDURO tyre) or smaller size (ALL TERRAIN tyre).
PRESS THE LEFT BUTTON TO SELECT ONE OF THE TWO OPTIONS.
WAIT 5 SECONDS TO PROCEED TO THE NEXT SETTING. DO NOT PRESS ANY BUTTONS.

2.1.3 Selecting the clock format (12- or 24-hour):
The default setting on the instrument is the 12-hour clock.
TO SELECT THE 12- OR 24-HOUR CLOCK, PRESS THE RIGHT OR LEFT BUTTON.
WAIT 5 SECONDS TO PROCEED TO THE NEXT SETTING. DO NOT PRESS ANY BUTTONS.

2.1.4 Setting the Time:
The time is set by increasing or decreasing it by 1 minute steps.
PRESS THE LEFT BUTTON TO DECREASE THE TIME.
PRESS THE RIGHT BUTTON TO INCREASE IT.
WAIT 5 SECONDS TO PROCEED TO THE NEXT SETTING. DO NOT PRESS ANY BUTTONS.

2.1.5 Selecting the maintenance reminder
The instrument displays the countdown to maintenance operations based on the data entered by the user. The data is based on the kilometres and miles travelled according to the unit of measure selected by the user. The factory setting is on “OFF”.
PRESS THE LEFT BUTTON TO LOWER THE NUMBER. PRESS THE RIGHT BUTTON TO RAISE IT (max value 10000Km).
WAIT 5 SECONDS TO EXIT SETUP MODE.
DO NOT PRESS ANY BUTTONS.
3 SCREENS
Switching between 3 normal modes
All of the information that the instrument is capable of providing is displayed on one of these 3 screens.
The instrument will stay on the set screen until a button is pressed to switch to another screen.
TO SWITCH FROM ONE SCREEN TO ANOTHER, PRESS EITHER THE RIGHT OR LEFT BUTTON BRIEFLY.
Screen 1:
• Speed • Distance 1 (DST) • Time
Screen 2:
• Speed • Distance 2 (DST2) • Time
Screen 3:
• Maximum speed (MAX) • Average speed (AVG)
• Accumulated running time (ART) • Odometer (ODO)
* Note: The maximum and average speeds are updated automatically when the user accesses screen 3.

4 FEATURES
General information:
During normal use the instrument is in “Normal” mode.
Available modes:
• Sleep Mode
• Choose from 3 “Normal” screens
• Clear Distance 1 (DST1)
• Clear Distance 2 (DST2)
• Clear Maximum/Average Speed (MAX/AVG)

Sleep Mode:
If the instrument does not receive any input for 5 minutes (either from the movement of the wheel or a button), it will go into “Sleep Mode”. In “Sleep Mode” only the time appears on the screen.
To exit “Sleep Mode” all the instrument requires is an input, either from the movement of the sensor or by pressing a button.
5 SPEEDOMETER

Speed
The speed is displayed in the centre of screens 1 or 2 and can range from 0 to 399.9 km/h or M/h. The unit of measure (km/h or M/h) appears next to the speed reading.

Maximum (Max) and Average (AVG) speed
The Maximum (MAX) or Average (AVG) speeds are displayed on screen 3 to the left of the display. The instrument automatically updates both the maximum (MAX) and average (AVG) speeds. To clear the maximum (MAX) and average (AVG) speeds, hold the right button down for 5 seconds.
Note: you must be on screen 3 to clear the speeds.

6 ADJUSTING THE TRAVELLED DISTANCE METER

Description
The travelled distance meter displays the distance that has been travelled since it was last cleared. It has two different distinguishing distances.
Travelled distance (DST)
The travelled distance can range from 0 to 9999.9 miles or kilometers and appears on the right side of screen 1. To clear the travelled distance, hold the right button down for 5 seconds.
Note: you must be on screen 1 to clear the travelled distance.

Travelled distance 2 (DST 2)
Travelled distance 2 can range from 0 to 9999.9 miles or kilometers and appears on the right side of screen 2. To clear the travelled distance, hold the right button down for 5 seconds.
Note: you must be on screen 2 to clear the travelled distance.

7 WARNING LIGHTS

7.1 Headlight indicator 1
The system activates the indicator in synchrony with the activation of the mains beams.

7.2 Direction indicator lights 2
The system activates the indicator in synchrony with the activation of the direction indicators.

7.3 Fuel reserve light 3
Indicator glows when the fuel reaches reserve level (page 11). Refuel as soon as possible.

7.4 Injection light 4
Indicates a fault in the injection system. Contact as soon as possible an authorized Betamotor.
2 CHECKS BEFORE AND AFTER USE

For safe driving and long vehicle life you should:

1. Check all fluid levels.
2. Check the correct operation of the brakes and brake pad wear (page 45).
3. Check pressure, general condition and thickness of tread.
4. Check that the spokes are properly tightened.
5. Check the tensioning of the chain (page 53).
6. Check the adjustment and the operation of all the cable controls.
7. Inspect all the nuts and bolts.
8. With the engine running, check the operation of the headlight, the rear and brake lights, the indicators, the warning lights and the horn.
9. Wash the motorcycle thoroughly after off-road use (page 59).

RUNNING IN

The running-in period lasts approximately 1.5 hours, during which it is advisable to:

1. During the first 3 hours of operation the engine should only be used to approximately 50 percent of its power. In addition, the engine speed should not exceed 7,000 rpm.
2. For the next 12 hours of operation the engine should only be used to about 75 percent of its power.

WARNING

After the first 3 hours change the engine and gear oil.

This procedure should be followed each time piston, piston rings, cylinder, crankshaft or crankshaft bearings are replaced.
FUELLING
Use unleaded petrol (gasoline).

Fuel tank capacity is shown on page 11.

To open the fuel tank’s cap, turn it anti-clockwise.

To close the fuel tank’s cap, set it on the tank and crew it clockwise.

WARNING
The refuelling should be performed with the engine off.

STARTING THE ENGINE
The bike starts ONLY with the battery mounted on the vehicle and connected to the electrical system.

Check that the gears are in neutral (page 17).

Close the side stand (page 18).

WARNING:
During start-up it is advisable not to operate the throttle.

WITH ELECTRIC STARTER (page 16):
Push the button until the engine starts.
Do not press the button while the engine is running.

NOTE: If the battery charge is not sufficient to allow the electric starter you can still start the bike with the start lever if the battery voltage is more than 8V.

WITH KICK-STARTER (page 17):
Depress the kick-starter with a sharp movement of the foot.

NOTE: In case of cold start with kick starter it is required to act on the starting lever for about three times.

WARNING:
Do not try to start the engine by combining the effect of the kick starter and the electric starter.
ENGINE SHUT-DOWN

To shut-down the engine press the button on the switch unit (page 16).

WARNING
In case of fall the vehicle turns off after about 5 seconds.
CHAPTER 3 ADJUSTMENTS

  Adjusting the rebound damper ......................................................................... 33
  Adjusting the hydraulic compression damper (high and low speeds) ............ 34
  Adjusting the spring preload .............................................................................. 34
ADJUSTMENTS

BRAKES

FRONT BRAKE
The front brake is disk type with hydraulic control.

The home position of brake lever 2 can be adjusted by means of screw 1.

REAR BRAKE
The home position of brake pedal 3 can be altered by turning adjusting screw 4 after loosening the counternut located under dust cap 5. Loosen the counternut and turn the adjusting screw until the desired height is obtained. Retighten the counternut after completing the operation.

CLUTCH
The adjustment screw 6 allows adjustment of the distance of lever 7 from the knob. The empty run is recovered automatically.

KEY TO SYMBOLS

- Tightening torque
- Threadlocker Medium
**ADJUSTMENT OF GAS CLEARANCE**

The throttle control cable should always have a 3-5 mm play. In addition, the idle speed should not change when the handlebars are fully rotated to the left or right. Push back protective cap 1. Loosen counternut 2 and turn adjusting screw 3. Tighten the counternut and check that the throttle twist grip turns smoothly.

**HANDLEBAR ADJUSTMENT**

**U-BOLT POSITION ADJUSTMENT**

The lower bracket 1 can be mounted on the holes nr. 2, 3 or 4 respectively.

To adjust the position of the u-bolt remove the screws shown in the figure.

Remove the handlebar.

Remove the screws 5.

Note: Before removing the screws 5 heat the area with a hairdryer of the type used by coachbuilders.

Position the U-bolt as required.

At the end refit the screws 5 after the application of thread lock fluid and tighten to the torque indicated.
Apply the handlebar.

Apply the top u-bolt.

Refit the screws 6. Tighten to the torque indicated.

**ADJUSTMENT OF THE HANDLEBAR POSITION**

The handlebar can be adjusted by rotating it back and forth.

To adjust the handlebar loosen screws 1.

Position the handlebar according to requirements.

Tighten to the torque indicated.
ADJUSTING FORK

ADJUSTING THE REBOUND DAMPER

The hydraulic rebound damper determines the behaviour of the telescopic fork during extension and can be adjusted by means of screw A. Turning the screw clockwise increases the action of the rebound damper; turning it anticlockwise decreases the action of the rebound damper.

For standard calibration, refer to page 12.

ADJUSTING THE COMPRESSION DAMPER

The hydraulic compression damper determines the behaviour of the telescopic fork during compression and can be adjusted by means of screw B located at the lower end of the fork legs. Turning the screw clockwise increases the action of the compression damper; turning it anticlockwise decreases the action of the compression damper.

For standard calibration, refer to page 12.

SHOCK ABSORBER

ADJUSTING THE REBOUND DAMPER

Turn screw A to adjust the hydraulic rebound damper.

Turning the screw anticlockwise (out) decreases the damping effect.

For standard setting, refer to page 12.
ADJUSTING THE SPRING PRELOAD

Loosen counter-ring E, rotate ring F clockwise to increase the spring preload (and consequently the shock absorber preload) or anticlockwise to decrease it. After obtaining the desired preload, turn counter-ring E until it stops against adjusting ring F.

For standard setting, refer to page 12.

NOTE: for the handling of ring nuts use the specific wrench provided in the standard tool kit shown in the figure.

ENGINE OIL
CHECK THE LEVEL
When engine is cold check the oil level by means of porthole 1. The oil level must be always visible from the porthole. In contrary case restore the oil level through cap 2 up to the upper edge of the inspection window. Use the oil indicated on page 14 in the “Recommended lubricants and liquids” table.

REPLACEMENT
Always perform the replacement when engine is hot:
- Position the drive on a flat base ensuring stability.
- Remove the engine casing by loosening the screws shown in the figure.
- Place a container under the engine.
- Unscrew filler plug 1 and drain plug 2.
- Remove the wire mesh filter.
- Drain all the oil from the crankcase.
- Thoroughly clean the drain plug, the wire mesh filter and the sealing surfaces.
- Mount the wire mesh filter and the drain plug.
- Tighten to the torque indicated.
To change the paper filter, remove the oil tap from engine unscrewing the two screws 3. Using special seeger ring pliers, pull the paper oil filter.

Mount the new paper filter, close the oil tap to engine, tighten the screws at 10 Nm.

Pour in the quantity of liquid indicated on page 11.
Use the oil indicated on page 14 in the “Recommended lubricants and liquids” table.

- Screw on filler cap 1 again.
- Start the engine and run at idle for a few minutes.
- Turn off the engine and wait for about one minute, then check the level and top up if needed, without exceeding the upper edge of the inspection window.

WARNING:
Hot oil can cause severe burns!

ATTENTION:
Dispose of used oil in compliance with the regulations in force.
CHECKS AND MAINTENANCE

GEARBOX OIL
CHECK THE LEVEL
Hold the vehicle upright. Position the drive on a flat base ensuring stability.

Remove the inspection cap 1.
The oil level must arrive to the lower edge of check hole.

In contrary case restore the oil level through cap 2.
Use the oil indicated on page 14 in the “Recommended lubricants and liquids” table.

REPLACEMENT
Always perform the replacement when engine is hot:
- Position the drive on a flat base ensuring stability.
- Remove the engine casing by loosening the screws shown in the figure.
- Place a container under the engine.

- Unscrew filler plug 2 and drain plug 3.
- Drain all the oil from the crankcase.
- Apply the cap 3 and tighten up to the specified torque.

Pour in the quantity of liquid indicated on page 11.
Use the oil indicated on page 14 in the “Recommended lubricants and liquids” table.
Close plug 2.

**WARNING:**
Hot oil can cause severe burns!

**ATTENTION:**
Dispose of used oil in compliance with the regulations in force.

---

**LIQUID COOLANT**

**CHECK THE LEVEL**

Keep the vehicle in vertical position relative to the ground.

The level of the coolant must be checked when the engine is cold. Use the following procedure:

- Unscrew cap 1 and ensure that the liquid is visible in the lower portion of the loading tube.

- In the case in which the liquid is not visible remove the vent screw 2 and proceed topping up.

- At the end of operation refit the filler cap and the vent screw.

Use the oil indicated on page 14 in the “Recommended lubricants and liquids” table.

**WARNING:**
Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!
REPLACEMENT
Keep the vehicle in vertical position relative to the ground.

Replacement of the coolant must take place when the engine is cold.
- Unscrew cap 1.

- Place a container under screw 2.
- Unscrew the screw 2.
- Drain the liquid.
- Tighten screw 2 applying the specific washer.
- Unscrew drain screw 3.
- Proceed to filling.
- Reapply the loading cap and the bleeding screw.

The amounts of liquid are shown on page 11.

Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.

WARNING:
Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!
AIR FILTER

Check after every ride.

To access the filter:
• Remove the saddle (page 64).
• Pull the cover air filter.

• Release filter fastener 1

• Pull out air filter 2

WARNING:
After every intervention, check that nothing has been left inside the filter box.

Reassemble by performing the operations in reverse order.
AIR FILTER CLEANING

• Thoroughly wash the filter with water and soap.

• Dry the filter.

• Wet the filter with filter oil and then remove the excess oil to prevent it from dripping.

• If necessary also clean the interior of the filter box.

WARNING:
Do not clean the filter with gasoline or petrol.

NOTE:
If the filter is damaged, replace it immediately.
To replace, contact authorised Betamotor customer service.

WARNING:
Never use the vehicle if the air filter is not in place. The infiltration of dust and dirt can cause damage and considerable wear.

WARNING:
After every intervention, check that nothing has been left inside the filter box.
SPARK PLUG

Keeping the spark plug in good condition will reduce fuel consumption and increase engine performance.

To accede to spark plug, is necessary to take off saddle and the fuel tank (page 64).

Examine the distance between the electrodes with a feeler. This distance should be from 0.5÷0.6 mm. If it is not, it may be corrected by bending the earth electrode.

Check as well that there are no cracks in the insulation or corroded electrodes. If so, replace immediately.

When replacing the spark plug, screw it in by hand until it stops, then tighten with a wrench.

WARNING:
Do not check while the engine is hot.
CHECK THE LEVEL OF THE FRONT BRAKE FLUID

Check the level of the brake fluid through sight A. The level of the fluid should never fall below the mark in the sight.

RESTORING THE LEVEL OF THE FRONT BRAKE FLUID

To restore the level of the brake fluid, loosen the two screws 1, lift cap 2 and add brake fluid until its level is 5 mm below the upper rim of the reservoir.

Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.

WARNING
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

BLEEDING THE FRONT BRAKE

To bleed air from the front brake circuit, proceed as follows:
• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the brake lever 2/3 times and keep the lever pressed.
• Unscrew the valve and let the oil drain.
• If air is still visible in the tube, repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE: during this procedure, continuously top up the brake pump thank to replace the oil that is out flowing.
• Remove the tube.
• Replace the rubber cap.
• Close the oil reservoir cap.

Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.
FRONT BRAKE LINING CONTROL
In order to verify the wear condition of front brake is enough to view the caliper from the bottom, where is possible to glimpse the brake lining tails which will have to show a brake of 2 mm in thickness. If the stratum is lesser let's start replacing them.

NOTE:
Perform the check according to the times shown in the table on page 61.

To replace, contact authorised Betamotor customer service.

REAR BRAKE
CHECK THE LEVEL OF THE REAR BRAKE FLUID
Check the level of the brake fluid through sight A. The level of the fluid should never fall below the mark in the sight.

RESTORING THE LEVEL OF THE REAR BRAKE FLUID
To restore the oil level, top up by means of oil filler cap 1.

Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.

WARNING
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.
BLEEDING THE REAR BRAKE

To bleed air from the rear brake circuit, proceed as follows:

• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the brake lever 2/3 times and keep the pedal pressed.
• Unscrew the valve and let the oil drain.
• If there are still visible in the tube repeat above operation until obtaining a continuous outflow of oil without air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the brake pump tank to replace the oil that is outflowing.
• Remove the tube.
• Replace the rubber cap.
• Close the oil reservoir cap.
Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.

FRONT BRAKE LINING CONTROL

In order to verify the wear condition of front brake is enough to view the caliper from the bottom, where is possible to glimpse the brake lining tails which will have to show a brake of 2 mm in thickness. If the stratum is lesser let’s start replacing them.

NOTE:
Perform the check according to the times shown in the table on page 61.
To replace, contact authorised Betamotor customer service.
CLUTCH CONTROL

CHECK THE LEVEL

To check the oil level in the clutch pump, first remove cover 1. Remove the two screws 2 and take off cover 1 together with the rubber bellows. With the clutch pump in a horizontal position, the level of the oil should be 5 mm below the upper rim. In the case where the level is lower than specified top up.

Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.

WARNING
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

BLEEDING

To bleed air from the clutch pump, proceed as follows:
• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the clutch lever 2/3 times and keep the lever pressed.
• Unscrew the valve and let the oil drain.
• If air is still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the pump tank to replace the liquid that is out flowing.
• Remove the tube.
• Replace the rubber cap.
Use the liquid indicated on page 14 in the “Recommended lubricants and liquids” table.

WARNING:
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

CHECK AND ADJUSTING OF STEERING PLAY

Periodically check the play in the steering sleeve by moving the fork back and forth as shown in the figure. Whenever you feel play, adjust as described below:

- Loosen the screws 1
- Loosen nut 2
- Reduce the play by turning nut 3

Tighten the screws to the prescribed torque values.
OIL FORK

The procedure for changing the oil in the forks is provided only for information. We recommend having the operation performed by a BETAMOTOR authorized workshop.

REMOVING LEGS

To replace, proceed as follows:

• Position the vehicle on the central bike stand.

• Remove the cable gland U-bolt 1.

• Remove the brake caliper 2.

• Remove cap 3, loosen the screws 4, slide the wheel pin out and remove the front wheel.

• Loosen shaft lock screws 5 and take off the slider.

OIL REPLACEMENT

• Place the legs vertically with cap 1 facing upwards. Loosen the upper cap 1.
• Loosen the counter-nut 2 and remove cap 1.

• Extract the spring 3 and overturn the pipe, making the oil escape.

• Move the pumping unit and drain the remaining oil. When the oil has been drained completely, introduce the amount of new oil described in chapter 1.

• Bleed the pumping unit of air, making it rise and fall until complete loading. Introduce the spring and screw the cap 1 until it is completely inserted on the pumping rod. Block the cap to the pumping rod via the counter-nut 2.
• Tighten the cap to the completely extended leg.

**LEGS ASSEMBLY AND PARTS**

Apply the legs to the vehicle and tighten the screws to the torque indicated.

**WARNING:**
Grease the screws before their application.

**WARNING:**
Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.

Apply wheel and wheel bolt.

Apply brake caliper, disc cover and fender.

Apply the cable gland U-bolt and tighten the screws to the torque indicated.

Place the vehicle on the ground.
Compress and release the fork 3-4 times.

Tighten the wheel bolt and the screws of the foot-peg.

**WARNING:**
Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.

## TYRES

Only fit tyres approved by BETAMOTOR. Unsuitable tyres can adversely affect the road holding of the vehicle.

- To protect your safety, immediately replace any damaged tyres.
- Slick tyres adversely affect the road holding of the vehicle, especially on wet roads and in off-road riding.
- Insufficient pressure results in abnormal wear and overheating of the tyres.
- The front and rear tyres must have the same tread design.
- Always measure the inflating pressures when the tyres are cold.
- Keep the tyre pressures within the prescribed range.
**CHAIN**

Checking the drive chain periodically to ensure longer chain life. Always keep it lubricated and clean of deposited dirt.

Take special care in preventing the lubricant from coming into contact with the rear tyre or brake disc, otherwise the tyre grip and the action of the brake would be greatly reduced, making it very difficult to control the vehicle.

**CHECK AND ADJUST TIGHTENING CHAIN**

Position the drive on a flat base ensuring stability.

If the chain play exceeds 30÷35 mm tension the chain.

- Loosen the pin 1.
CHECK FOR CHAIN WEAR
Shift into neutral, pull up the upper stretch of the chain with a force of 10-15 kg (see figure). Measure the length of 18 links on the lower stretch of the chain. If the length is ≥ 272 mm, replace the chain. Chains do not always wear evenly. For this reason it is important that the measurement is taken at different points along the chain.

When fitting a new chain, be sure to replace the chainring and sprocket as well. New chains wear more quickly if fitted on old and worn sprockets. After replacing the chain, adjust its tension as described on page 53.
HEADINGMT
Keep the headlight glass clean at all times (see page 59).
Periodically check the correct angle of the light beam.

REPLACING THE HEADLIGHT BULBS
Release both spring washers and move forward the lamp holder front cowl.
Carefully remove the headlight bulb 1 together with lamp holder. To replace the high beam / low beam, lift the rubber cover 2, release connector, push on the spring 3 and remove the lamp holder and replace the light bulb with a new one. Be careful not to touch the bulb so as not to compromise its efficiency.
To refit, follow the procedure above but in reverse order.
Fasten the lamp holder front cowl to the supporting pins and fix it with the two elastics.

TAIL LIGHT
Keep the tail light glass clean at all times (see page 59).
The LED tail light is sealed. In the case of burnout of one or more LEDs it is necessary to replace the entire group.
To replace, contact authorised Betamotor customer service.
BATTERY

Battery is located under the saddle and requires no maintenance.

Keep the battery terminals clean. If necessary, protect them with a thin film of acid-free grease.

BATTERY REMOVAL AND ASSEMBLY

Remove the saddle (page 64).

Release the rubber band.

FIRST disconnect the negative connector (black) from negative (-) pole and THEN positive connector (black) from negative (+) pole.

Remove the battery.

When fitting the battery, insert it with the terminals as shown in picture.

FIRST connect the positive connector (red) from positive (+) pole and then negative connector (black) from negative (-) pole.

Reattach the rubber band.

WARNING:
Exercise extreme caution if, for any reason, the electrolyte (sulphuric acid) should come out of the battery. The electrolyte can cause serious burns. In case of contact with the skin, rinse abundantly with water.

Should the electrolyte come into contact with the eyes, rinse with water for at least 15 minutes and immediately seek medical attention.

Even though the battery is sealed, there is a possibility that explosive gases may leak out.

Keep sparks and open flames away from the battery.

Keep spent batteries out of the reach of children and dispose of them as prescribed by law.

Do not remove the protections.

When installing the battery, be sure to observe the polarity of the terminals.
INACTIVITY

If the vehicle is not going to be used for a long time, remove the battery and charge it every 15 days using a suitable charger.

Store the battery in a dry place at a temperature of 5 to 35°C and out of the reach of children.

CHARGING THE BATTERY

Using an open-circuit multimeter (10-12 hours after the activation), check that the voltage is greater than 12.6 V. If it is lower, it is advisable to recharge the battery.

Based on the type of charger available, charge the battery using either of the following procedures:

• Constant voltage (14.4-15 V) - Charge the battery for about 12 hours. Check the voltage 10-12 hours after the end of recharge as described above.
• Constant current: Charge battery at 0.5-0.8 A until the voltage between the terminals stabilizes at ~14.5 V.

WARNING:
The battery is sealed. When recharging it, do not remove the seal nor add any liquid.
FUSES

To access the fuse, remove the saddle (page 64).

Fuse 1: in the event of a blown fuse, the services listed in the table are not operational:

<table>
<thead>
<tr>
<th>Rear lights</th>
<th>Stop</th>
<th>Front lights</th>
<th>Tachometer and control lights</th>
<th>Turn lights</th>
<th>Klaxon</th>
<th>Electric fan (optional)</th>
</tr>
</thead>
</table>

Fuse 2: in the event of a blown fuse, the vehicle stops/does not start.

Fuse 3: in the event of a blown fuse, the vehicle does not start/stops.

Three spare fuses comes with the kit accompanying the vehicle

A blown fuse should only be replaced with another of the same type.
Should the new fuse also burn out when fitted, immediately contact a specialized BETAMOTOR dealer.
CLEANING THE VEHICLE

WARNING: Do not clean your vehicle with a high-pressure device with a strong jet of water. Excessive pressure can reach electrical components, connectors, flexible cables, bearings, etc and can damage or destroy them.

WARNING: Wash motorbikes frequently that are used near the sea (salty air) and on roads subject to salt spreading in winter. Cover with a film of oil or silicone spray unpainted parts and the most exposed parts such as wheels, forks and swingarm. Do not treat rubber parts and brakes.

When cleaning, avoid direct exposure to sunlight.

Close off the exhaust system to prevent water from entering.

Avoid directing the jet of water onto the air filter box cover and the throttle body.

Use water jet to soften the dirt and mud accumulated on the paintwork, then remove them with a soft bodywork sponge soaked in water and shampoo. Subsequently rinse well with water, and dry with air and cloth or suede leather.

Proceed to the emptying of the filter box using the appropriate ventilation and drying.

Detergents pollute water. Always wash the vehicle in areas equipped for collection and purification of the washing liquids.

After cleaning, ride a short distance until the engine reaches operating temperature.

WARNING: braking effect is reduced with wet brakes. Operate the brakes cautiously to allow them to dry.

Push back the handlebar control covers, so that water can evaporate.

When the bike is completely dry and cooled down, lubricate all moving parts.

Treat all plastic and painted components with non-aggressive detergents or products that are specific for the care of the motorcycle.

To prevent malfunction of the electrical system, treat electric contacts and switches with electrical contact spray.
PROLONGED INACTIVITY

A few simple operations should be performed to keep the vehicle in good condition whenever it is to remain inactive for a long period (e.g. during the winter):

• Thoroughly clean the vehicle.
• Reduce the tyre pressures by approximately 30 percent, and if possible raise the tyres off the ground.
• Cover the unpainted parts, excepting the brakes and the rubber parts, with a film of oil or spray silicone.
• Remove the battery and keep it in a dry place. Charge the battery every 15 days.
• Protect the vehicle with a dust cover.

AFTER PROLONGED INACTIVITY

• Reinstall the battery.
• Restore the tyre inflating pressures.
• Check the tightening of all the screws having an important mechanical function.
### SCHEDULED MAINTENANCE VEHICLE

The required engine maintenance is strongly depending on the level of use and on the accordingly done periodic checks and service. The below mentioned maintenance intervals are for standard competition use, subject to the condition that the engine was never running under extraordinary conditions and the periodic service was done accurately.

CHAPTER 5 REPLACEMENTS

CONTENTS
Removal and refitting of the saddle ............................................................. 64
Removal and refitting of the tank ................................................................. 65
REMOVAL AND REFITTING OF THE SADDLE

Press button 1.

Remove the saddle towards the rear of the motorcycle.

To re-assemble:
Insert the cavity 1 of the saddle in slot 2.

Press the saddle down in the middle and at the same time, push it forwards until the bayonet joint engages in its seat.
WARNING
Make sure the bayonet joint 3 is firmly inserted into the button lock.

REMOVAL AND REFITTING OF THE TANK
Remove the saddle (page 64).
Remove the two screws fastening the tank to the frame and the screw (one per side) securing the fairing to the radiator.

Disconnect the fuel hose by pressing the appropriate button of the quick coupling.

Lift the tank.
Disconnect the electrical connector 3 and 4.

Remove the tank with its fairings.

Reassemble proceeding in the reverse order.

**WARNING**
For safety reason, the fuel flow is stopped when the connector is even partially engaged.
Make sure that the fuel quick release fittings are well inserted.
