Thank you for choosing Beta as your next Motorcycle! All of us at Beta USA would like to say Thank You for your purchase and we hope you will enjoy many years of fun and excitement with your new Beta.

Our service email line is service@betausa.com if you should have any questions or concerns.

Sincerely,
Tim Pilg and the entire Beta USA staff
IMPORTANT

We recommend you to check all the tightenings after the first one or two hours’ ride over rough ground. Special attention should be paid to the following parts:

• rear sprocket
• ensure that the footrests are properly fixed
• front/rear brake levers/calipers/discs
• check that the plastics are properly fastened
• engine bolts
• shock absorber bolts/swingarm
• wheel hubs/spokes
• rear frame
• pipe connections
• tensioning the chain

IMPORTANT

In the event of interventions on the vehicle, contact Betamotor after-sales service.

OPERATING INSTRUCTIONS

• The vehicle must be accompanied by: number-plate, registration document, tax disc and insurance.
• Do not sit on the vehicle when it is on its stand.
• Do not start the engine in closed places.

WARNING
Any modifications and tampering with the vehicle during the warranty period exempt the manufacturer from all responsibility and invalidate warranty.

SYMBOLS

SAFETY/ATTENTION
Failure to respect information marked with this symbol can entail a personal hazard.

INTEGRITY OF THE VEHICLE
Failure to respect information marked with this symbol can entail serious damage to the vehicle and termination of the warranty.

FLAMMABLE LIQUID HAZARD
Read the use and maintenance manual carefully.

MANDATORY TO WEAR PROTECTIVE CLOTHING
Use of the vehicle is subject to wearing specific protective clothing and safety footwear.

PROTECTIVE GLOVES MANDATORY
To perform the operations described, it is mandatory to wear protective gloves.

FORBIDDEN TO USE NAKED FLAMES OR POSSIBLE UNCONTROLLED IGNITION SOURCES

NO SMOKING

DO NOT USE MOBILE PHONE

CORROSIVE SUBSTANCES HAZARD
Liquids marked with this symbol are highly corrosive: handle with care

POISONING HAZARD
RIDING SAFETY

• Observe the Highway Code.
• Always wear approved personal protective equipment.
• Always keep the crash helmet visor clean.
• Do not keep sharp or brittle objects in your pockets while riding.
• Properly adjust the rearview mirrors.
• Always ride in a seated position, with both hands on the handlebars and both feet on the footrests.
• Never ride abreast with other vehicles.
• Do not tow and avoid being towed by other vehicles.
• Always keep a safe distance from other vehicles.
• Do not start off while the vehicle is on its stand.
• Avoid swaying and wheelies as they are extremely dangerous for your own and other people’s safety as well as for your vehicle.
• Always apply both brakes on dry roads with no gravel and sand. Using one brake may be dangerous and cause uncontrolled skidding.
• To reduce the braking distance, always apply both brakes.
• On wet roads and in off-road riding, drive with care and at moderate speed. Take special care in applying the brakes.

VEHICLE IDENTIFICATION DATA

FRAME IDENTIFICATION

Frame identification data A are stamped on the right side of the steering head tube.

ENGINE IDENTIFICATION

Engine identification data B are stamped in the area shown in the figure.

TOOLS KIT

The following items are supplied as standard: operation, maintenance manual, tool kit and the cable adapter to connect the CAN socket to a scantool (see photo).

The hex key 1 and its socket wrench (8 mm) are found inside the battery compartment. Remove the seat to reach them (page 80).
FAMILIARIZING WITH THE VEHICLE

MAIN PARTS

1 - Fuel tank
2 - Tank cap
3 - Silencer
4 - Rear shock absorber
5 - Headlight
6 - Rear light
7 - Side stand
8 - Fork
9 - Rider’s footrests
10 - Lower bumper (Bumper kit)
11 - Saddle
12 - Engine
13 - Front mudguard
14 - Number-plate holder
15 - Kick-start
16 - Gear lever
17 - Rear brake lever
18 - Front brake lever
19 - Clutch lever
20 - Throttle
21 - Fork covers
22 - Rear mudguard
23 - Cover air filter
24 - Front indicators
25 - Rear indicators

MAIN PARTS

CLUTCH LEVER
Clutch lever 1 is fitted to the left-hand side of the handlebars.

LH SWITCH
The dip and service switch is located on the left side of the handlebar and is composed as follows:
1 - Horn button;
2 - Dip switch:
   - parking lights and high beam;
   - parking lights and low beam;
3 - Flash-to-pass button;
4 - Turn signal light switch: shifting lever left or right activates the left or right indicators. When released, the lever returns to the central position. Press it to turn the indicators off.

RH SWITCH
Starter button 1 is located on the right-hand side of the handlebars and operate the electric engine starter. For startup, refer to page 32.
Do not press the button 1 while the engine is running.

The button 2 turns off the engine.
FRONT BRAKE LEVER AND GAS CONTROL
The front brake lever A and the gas throttle B are located on the right side of the handlebar.

GEAR CHANGE LEVER
Gear change lever is fitted to the left side of the engine. The positions corresponding to the different gears are shown in the figure.

BRAKE PEDAL
Brake pedal is located in front of the right-hand footrest.

KICKSTART - OPTIONAL
The kick-starter pedal is located on the right side of the engine. The upper part is rotatable. To start, depress the kick-starter outward and with a quick movement downward. The pedal will automatically return upwards. After starting, manually fold the pedal in the rest position.
SIDE STAND
Press down side stand with the foot and lean the vehicle against it. Ensure that the ground is solid and the vehicle stands steadily.

⚠️ WARNING: do not climb on the vehicle when the side stand is down.

If the vehicle is used off-road, the closed stand can be further fastened by means of rubber band.

KEYS
The vehicle is supplied with two keys (one key and its spare).
STEERING LOCK

To activate the steering lock:
- turn the handlebar counter-clockwise;
- push the key and turn counter-clockwise;
Remove the key from this position.
To deactivate the steering lock:
- turn the key clockwise;
- turn the handlebar clockwise;
From this position, the handlebar is free to move, the key can be removed.

WARNING: do not keep the spare key inside the vehicle, but in a safe place.
We suggest you note the code number stamped on the keys. In this way you can obtain a duplicate.

3.2.8 Unit option display
3.2.9 Wheel length display
3.2.10 Motorbike battery level
3.2.11 Push Button Management Table
3.3 Telltales
4 Coin battery

1 GENERAL INFORMATION

The dashboard integrates these main blocks:

- LCD display for showing all required information
- 2 pushbuttons
- Coin battery

2 OPERATING CONDITION

Standard supply voltage: 10 to 16V
Minimum supply voltage w/o reset: 6.5V
3 GENERAL CHARACTERISTICS
3.1 DASHBOARD START-UP PROCESS

The dashboard do some start-up process when is turned ON. There are three different wakes up events for starting the dashboard.

This start-up process consists in turning ON the telltales and the LCD backlight and the LCD will show all the segments during 2 seconds. After the start-up process, dashboard is kept ON during 30 seconds if there are no events as pushbutton press, speed signal or engine ON.

3.1.1 WAKE UP EVENTS

3.1.1.1 Motorbike power supply is activated

When the power supply of dashboard is activated (e.g. when engine is turned on), the dashboard does the normal start-up process and is kept ON while

3.1.1.2 Wheel revolution

If the motorbike generated a speed pulse, the dashboard will be turned ON doing the normal start-up process. After the start-up process the dashboard will display the normal mode, and will be ON during 30 seconds if no speed pulse is generated.

3.1.1.3 Button is pushed

If one or both buttons are pushed the dashboard will be turned ON doing the start-up process. After the start-up process the dashboard will display the normal mode, and will be ON during 30 seconds if no pushbutton is pressed.

3.2 LCD DISPLAY

Dashboard is equipped with a LCD display for showing following information:
- Speed
- SoC vehicle battery
- Odometer (distance or ride time)
- Trip TOTAL-A-B (distance or ride time)
- Clock

Each information/data is refreshed independently at different rate, depending on information type and variability of this information.
3.2.1 LCD GENERAL CHARACTERISTICS

Each information/data is refreshed independently at different rates, depending on information type and variability of this information.

3.2.2 SPEED

Dashboard computes and displays the motorbike speed on LCD display. Speed information can be obtained from:
Dedicated digital input for measuring speed sensor frequency.

3.2.2.1 Speed digital input configuration

Configuration parameters for speed input and speed visualization.
Dimensions displayed: [km/h or mph]
Minimum speed indication: [5 km/h]
Speedometer advance: [5 %]

Wheel parameters:
• Wheel perimeter selectable between 2 values:
  • Default wheel perimeter value: (enduro) 2100mm
  • 2nd wheel perimeter value: 1811mm
• Pulses per turn: [1 pulses/turn]

3.2.2.2 Speed LCD

Speed and speed units are permanently displayed (km/h or mph).
km/h display range: 0 to 199km/h.
mpm display range: 0 to 199mph.
Leading zeros suppressed.
Following picture shows LCD displaying speed in km/h and mph:
3.2.3 ODOMETER

Dashboard provides an odometer and is displayed on LCD display. This option can be displayed scrolling by “MODE” button. 6 digits and “ODO” icon lighted. Leading zeros not suppressed. Display range from 000000 to 999999 km or miles. If odometer is greater than 999999 km, odometer will be fixed as 999999km. Minimum display unit: 1 km or mile.

![Odometer Display](image1)

3.2.4 TRIP A

Dashboard provides 2 trips and is displayed on LCD display. This option can be displayed scrolling by “MODE” dashboard button. 4 digits (3digits + decimal point + 1 digit), “TRIP” icon lighted and “A” on the left. Leading zeros suppressed. Display range from 0.0 to 999.9 km or miles. Trip A counter counts from 0 up to 999.9 and then rolls over to 0 and continue counting. Minimum display unit: 0.1 km or miles. Trip A reset by pressing “SET” button more than 2 seconds. Trip A display the Trip A ride time pressing “SET” button less than 2 seconds. Ride time is showed as an hour decimal number. Examples: 30 min is 0.5 or 1h20min is 1.3.

![Trip A Display](image2)
3.2.5 TRIP B

This option can be displayed scrolling by “MODE” dashboard button. 4 digits (3 digits + decimal point + 1 digit), “TRIP” icon lighted and “B” on the left. Leading zeros suppressed. Display range from 0.0 to 999.9 km or miles. Trip B counter counts from 0 up to 999.9 and then rolls over to 0 and continue counting. Minimum display unit: 0.1 km or miles. Trip B reset by pressing “SET” button more than 2 seconds. Trip B display the Trip B ride time pressing “SET” button less than 2 seconds. Ride time is showed as an hour decimal number. Examples: 30 min is 0.5 or 1 h 20 min is 1.3.

3.2.6 CLOCK

Dashboard provides a clock and is displayed on LCD display. Time is obtained from internal crystal quartz and is kept while dashboard is connected to coin battery.

<table>
<thead>
<tr>
<th>Clock format</th>
<th>If units of measure are km 24h</th>
<th>If units of measure are mi 12h</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
3.2.7 RIDE TIME
Dashboard provides a Ride Time and is displayed on LCD display. Time is obtained from internal crystal quartz and is kept with a push buttons. When the motorbike is turned on the ride time starts again.

3.2.8 UNIT OPTION DISPLAY
Dashboard provides the possibility to change the units and be displayed.

3.2.9 WHEEL LENGTH DISPLAY
Dashboard provides the possibility to change the wheel length and be displayed. The length can be selected between 2 fixed values:
- 2100mm (enduro)
- 1811mm

Pushing mode and set more than 2 seconds wheel length is saved. “Saved” will be displayed during 1 second on Dashboard.
3.2.10 MOTORBIKE BATTERY LEVEL

Dashboard displays level of voltage of battery power supply:
Relationship between bars and level of voltage:

<table>
<thead>
<tr>
<th>Bars</th>
<th>Voltage [V]</th>
<th>Bars</th>
<th>Voltage [V]</th>
</tr>
</thead>
<tbody>
<tr>

<td>14</td>
</tr>
<tr>
<td>3 → 4</td>
<td>12.5</td>
<td>7 → 8</td>
<td>14.5</td>
</tr>
</tbody>
</table>

Battery level is updated every 30 seconds. Each update increase or decrease 1 bar.

WARNING:
If the word “HIGH” appears with the battery indicator flashing, turn off the engine and disconnect the battery as described on page 68.

</tr>
</tbody>
</table>
Power +12V are provided to the dashboard only when the bike is turned on (regulator line).

Blinkers LED

The system activates the indicator in synchrony with the activation of the direction indicators.

High beam LED

The system activates the indicator in synchrony with the activation of the high beam.

Reserve LED

MIL LED

Indicates a fault in the engine management system. In case of prolonged lighting, consult an authorised Betamotor dealer as soon as possible.

4 COIN BATTERY

Dashboard is equipped with a coin battery (1) for keeping time when motorbike is off. Coin size: CR2032.
2 CHECKS BEFORE AND AFTER USE

For safe driving and long vehicle life you should:

1. Check all fluid levels.
2. Check the correct operation of the brakes and brake pad wear (page 54).
3. Check pressure, general condition and thickness of tread.
4. Check that the spokes are properly tightened.
5. Check the tensioning of the chain (page 65).
6. Check the adjustment and the operation of all the cable controls.
7. Inspect all the nuts and bolts.
8. With the engine running, check the operation of the headlight, the rear and brake lights, the indicators, the warning lights and the horn.
9. Wash the motorcycle thoroughly after off-road use (page 71).

RUNNING IN

The running-in period lasts approximately 15 hours, during which it is advisable to:

1. During the first 3 hours of operation the engine should only be used to approximately 50 percent of its power. In addition, the engine speed should not exceed 7,000 rpm.
2. For the next 12 hours of operation the engine should only be used to about 75 percent of its power.

WARNING
After the first 3 hours change the engine and gear oil.

This procedure should be followed each time piston, piston rings, cylinder, crankshaft or crankshaft bearings are replaced.
FUELLING

Use unleaded petrol (gasoline).

Disconnect the ventilation pipe 1. To open the tank turn the cap 2 anticlockwise.

To close the fuel tank’s cap, set it on the tank and crew it clockwise.

Fuel tank capacity is shown on page 10.

WARNING:
The refuelling should be performed with the engine off.

When the operation is finished, reconnect the ventilation pipe.

⚠️ WARNING:
Fire hazard. Fuel is highly flammable.

⚠️ Always stop the engine when refuelling and keep open flames and lighted cigarettes away.

⚠️ Do not top up fuel while using a mobile phone.

Refuel in an open well ventilated area.

Pay special attention so that the fuel does not come into contact with hot parts of the vehicle. Immediately clean up any spilled fuel.

⚠️ WARNING: Risk of poisoning.

Fuel is poisonous liquid and a health hazard.

⚠️ Fuel must not come into contact with the skin, eyes, and clothing. Do not breathe in the fuel vapours. If contact occurs with the eyes, rinse immediately with plenty of water and seek medical advice. If contact occurs with skin, immediately clean contaminated areas with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that is contaminated with fuel.

⚠️ WARNING: Environmental pollution hazard.

The fuel must not contaminate the ground water, the ground, or the sewage system.
2 STARTING THE ENGINE

The bike starts ONLY with the battery mounted on the vehicle and connected to the electrical system.

Check that the gears are in neutral (page 17).

Close the side stand (page 18).

WARNING:
During start-up it is advisable not to operate the throttle.

WITH ELECTRIC STARTER (page 16):
Press the startup button for a max of 3 seconds. If the vehicle does not startup, wait 30 seconds before attempting a new startup.

NOTE
Pauses are needed to diffuse the generated heat and to avoid damaging the battery. If the battery is at a temperature below 15°C, the electric startup will be weak, not because the battery is deteriorated but because it needs to be warmed up. Therefore, with temperatures below 15°C, several startup attempts may be necessary to heat the battery and thereby increase the battery power provided by the battery.

Do not press the button while the engine is running.

NOTE: If the battery charge is not sufficient to allow the electric starter you can still start the bike with the start lever if the battery voltage is more than 8V.

WITH KICK-STARTER (page 17):
Depress the kick-starter with a sharp movement of the foot. In case of cold start with kick starter it is required to act on the starting lever for about three times.

WARNING:
Do not try to start the engine by combining the effect of the kick starter and the electric starter.

ENGINE SHUT-DOWN

To shut-down the engine press the button on the switch unit (page 16).

WARNING:
In case of fall the vehicle turns off after about 5 seconds.
VEHICLE PREPARATION FOR USE IN HEAVY-DUTY CONDITIONS

Using the vehicle in heavy-duty conditions, such as sand or wet or muddy soils, may require the corrective actions mentioned below.

The following are considered heavy-duty operating conditions:

- Dry sand
- Wet sand
- Particularly wet and muddy soils
- Driving in high temperature and low speed conditions
- Driving in low temperature and snow conditions

General actions:

- Verify filter and filter box cleaning (page 49)
- Verify tensioning and wear of the chain (page 66)
- Verify all electrical connectors, making sure they are well connected. Keep them dry and clean.

USE ON DRY SAND

- Apply specific protection against sand to the air filter
- Clean the chain
- Assemble a steel crown. For this operation contact the Betamotor service network. (Do not grease the chain!)
- Verify that the radiator fins are clean
- Verify that the radiator fins are not bent

USE ON WET SAND

- Apply an anti-water cap for the water filter
- Clean the chain
- Assemble a steel crown. For this operation, contact the Betamotor service network. (Do not grease the chain!)
- Verify that the radiator fins are clean
- Verify that the radiator fins are not bent
USE ON PARTICULARLY WET AND MUDDY SOILS
- Apply an anti-water cap for the water filter
- Assemble a steel crown. For this operation contact the Betamotor service network.
- Verify that the radiator fins are clean
- Verify that the radiator fins are not bent
- After use, proceed with washing (page 71)

DRIVING IN HIGH TEMPERATURE AND LOW SPEED CONDITIONS
- Adjust crown size based on the route.
  Note: The oil has a tendency to heat up quickly when there is frequent clutch use and when using a crown whose dimensions are excessive. For this operation contact the Betamotor service network.
- Clean the chain
- Verify that the radiator fins are clean
- Verify that the radiator fins are not bent
- Verify cooling liquid level (page 47)
- For this use it is recommended to use an electric fan (optional). For the code, refer to the Betamotor accessory catalogue.

DRIVING IN LOW TEMPERATURE AND SNOW CONDITIONS
- Apply water protection to the air filter
- After use, proceed with washing (page 71)

ADJUSTMENTS

KEY TO SYMBOLS

- Tightening torque
- Threadlocker Medium

BRAKES

FRONT BRAKE

The front brake is disk type with hydraulic control.

The home position of brake lever 2 can be adjusted by means of screw 1.

REAR BRAKE

The home position of brake pedal 3 can be altered by turning adjusting screw 5 after loosening the counternut located under dust cap 4. Loosen the counternut and turn the adjusting screw until the desired height is obtained. Retighten the counternut after completing the operation.

CLUTCH

The adjustment screw 6 allows adjustment of the distance of lever 7 from the knob. The empty run is recovered automatically.
**ADJUSTMENT OF GAS CLEARANCE**

The throttle control cable should always have a 3-5 mm play. In addition, the idle speed should not change when the handlebars are fully rotated to the left or right. Push back protective cap 1. Loosen counternut 2 and turn adjusting screw 3. Tighten the counternut and check that the throttle twist grip turns smoothly.

**IDLE ADJUSTMENT**

The minimum speed is controlled directly by the electronic control unit. Any manual adjustment is not allowed.

⚠️ WARNING! Do not modify the indicated screw for any reason. Modifying the position of this screw may cause abnormal response behaviour and engine operation. Moving the indicated screw, in terms of the warranty, is considered tampering.

**HANDLEBAR ADJUSTMENT**

**U-BOLT POSITION ADJUSTMENT**

The lower bracket 1 can be mounted on the holes nr. 2, 3 or 4 respectively.
To adjust the position of the u-bolt remove the screws shown in the figure.

Remove the handlebar.

Remove the screws 5.

NOTE: Before removing the screws 5 heat the area with a hairdryer of the type used by coachbuilders.

Position the U-bolt as required.

At the end refit the screws 5 after the application of thread lock fluid and tighten to the torque indicated.

Apply the handlebar.

Apply the top u-bolt.

Refit the screws 6. Tighten to the torque indicated.

ADJUSTMENT OF THE HANDLEBAR POSITION

The handlebar can be adjusted by rotating it back and forth.

To adjust the handlebar loosen screws 1.

Position the handlebar according to requirements.

Tighten to the torque indicated.
ADJUSTING FORK

ADJUSTING THE REBOUND DAMPER

The hydraulic rebound damper determines the behaviour of the telescopic fork during extension and can be adjusted by means of screw A. Turning the screw clockwise increases the action of the rebound damper; turning it anticlockwise decreases the action of the rebound damper.

For standard calibration, refer to page 11.

ADJUSTING THE COMPRESSION DAMPER

The hydraulic compression damper determines the behaviour of the telescopic fork during compression and can be adjusted by means of screw B located at the lower end of the fork legs. Turning the screw clockwise increases the action of the compression damper; turning it anticlockwise decreases the action of the compression damper.

For standard calibration, refer to page 11.

SHOCK ABSORBER

ADJUSTING THE REBOUND DAMPER

Turn screw A to adjust the hydraulic rebound damper.

Turning the screw anticlockwise (out) decreases the damping effect.

For standard setting, refer to page 11.
ADJUSTING THE SPRING PRELOAD

Loosen counter-ring E; rotate ring F clockwise to increase the spring preload (and consequently the shock absorber preload) or anticlockwise to decrease it. After obtaining the desired preload, turn counter-ring E until it stops against adjusting ring F.

For standard setting, refer to page 11.

NOTE: for the handling of ring nuts use the specific wrench provided in the standard tool kit shown in the figure.
**STATIC SAG LOAD TEST**

To verify the static sag of the shock absorber proceed as follows:

- Place the motorcycle on the work stand.
- Measure the vertical distance between the rear wheel axle and a reference point on the rear fairings.
- Write down the dimension $H_1$.
- Remove the work stand.
- Keep the motorcycle in vertical position and measure again the distance between the wheel axle and the reference point previously established.
- Write down the dimension $H_2$.

Verify that the value of the static compression $X = H_1 - H_2$ matches the one shown on page 11. Otherwise, perform the adjustment of the spring preload as described above.
SUSPENSIONS SETTINGS ACCORDING TO THE WEIGHT OF THE RIDER

The table below shows the spring constant $K$ of the suspensions (fork and shock absorber) depending on the weight of the driver.
Refer to the accessories catalogue Betamotor to obtain the spring codes.

<table>

ENGINE OIL
CHECK THE LEVEL
When engine is cold check the oil level by means of porthole 1. The oil level must be always visible from the porthole. In contrary case restore the oil level through cap 2 up to the upper edge of the inspection window. Use the oil indicated on page 13 in the “Recommended lubricants and liquids” table.

REPLACEMENT
Always perform the replacement when engine is hot:
- Position the drive on a flat base ensuring stability.
- Remove the engine casing by loosening the screws shown in the figure.
- Place a container under the engine.

⚠️ WARNING:
Hot oil can cause severe burns!

- Unscrew filler plug 1 and drain plug 2.
- Remove the wire mesh filter.
- Drain all the oil from the crankcase.
- Thoroughly clean the drain plug, the wire mesh filter and the sealing surfaces.

- Mount the wire mesh filter and the drain plug.
- Tighten to the torque indicated.
To change the paper filter, remove the oil tap from the engine unscrewing the two screws \( \text{3} \). Using special seeger ring pliers, pull the paper oil filter.

Mount the new paper filter, close the oil tap to the engine, tighten the screws at 10 Nm.

Pour in the quantity of liquid indicated on page 10.
Use the oil indicated on page 13 in the “Recommended lubricants and liquids” table.

- Screw on filler cap \( \text{1} \) again.
- Start the engine and run at idle for a few minutes.
- Turn off the engine and wait for about one minute, then check the level and top up if needed, without exceeding the upper edge of the inspection window.

**WARNING:**
Hot oil can cause severe burns!

**ATTENTION:**
Dispose of used oil in compliance with the regulations in force.

Re-assemble the engine protection plate by tightening the screws to 10Nm.
GEARBOX OIL

CHECK THE LEVEL

Hold the vehicle upright. Position the drive on a flat base ensuring stability.

Remove the inspection cap 1.

The oil level must arrive to the lower edge of check hole.

In contrary case restore the oil level through cap 2.

Use the oil indicated on page 13 in the “Recommended lubricants and liquids” table.

REPLACEMENT

Always perform the replacement when engine is hot:
- Position the drive on a flat base ensuring stability.
- Remove the engine casing by loosening the screws shown in the figure.
- Place a container under the engine.

WARNING:
Hot oil can cause severe burns!

- Unscrew filler plug 2 and drain plug 3.
- Drain all the oil from the crankcase.
- Apply the cap 3 and tighten up to the specified torque.

Pour in the quantity of liquid indicated on page 10.
Use the oil indicated on page 13 in the “Recommended lubricants and liquids” table.
Close plug 2.

WARNING:
Hot oil can cause severe burns!

ATTENTION:
Dispose of used oil in compliance with the regulations in force.
Re-assemble the engine protection plate by tightening the screws to 10Nm.

LIQUID COOLANT

CHECK THE LEVEL
Keep the vehicle in vertical position relative to the ground.
The level of the coolant must be checked when the engine is cold. Use the following procedure:
- Unscrew cap 1 and ensure that the liquid is visible in the lower portion of the loading tube.
- In the case in which the liquid is not visible remove the vent screw 2 and proceed topping up.
- At the end of operation refit the filler cap and the vent screw.

Use the oil indicated on page 13 in the “Recommended lubricants and liquids” table.

WARNING: Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!

WARNING:
Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

Avoid any direct contact of the coolant with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice;
- with skin, Immediately clean contaminated areas with soap and water Change clothing that is contaminated with coolant.
If coolant is swallowed, contact a doctor immediately.
REPLACEMENT

Keep the vehicle in vertical position relative to the ground.

Replacement of the coolant must take place when the engine is cold.

- Remove the engine casing by loosening the screws shown in the figure.

- Unscrew cap 1.

- Place a container under screw 2.

- Unscrew the screw 2.

- Drain the liquid.

- Tighten screw 2 applying the specific washer.

- Re-assemble the engine protection plate by tightening the screws to 10Nm.
- Unscrew drain screw 3.
- Proceed to filling.
- Reapply the loading cap and the bleeding screw.

The amounts of liquid are shown on page 10.

Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

**WARNING:**
Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!

**WARNING:**
Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!

**WARNING:**
Wear appropriate protective clothing and protection gloves.

**WARNING:**
Keep coolant out of reach of children.

Avoid any direct contact of the coolant with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, Immediately clean contaminated areas with soap and water. Change clothing that is contaminated with coolant.

If coolant is swallowed, contact a doctor immediately.

**AIR FILTER**

Check after every ride.

To access the filter:
• Remove the saddle (page 80).
• Unhook the filter cover panel by pulling it outward.
**AIR FILTER CLEANING**

- Thoroughly wash the filter with water and soap.
- Dry the filter.
- Wet the filter with filter oil and then remove the excess oil to prevent it from dripping.
- If necessary also clean the interior of the filter box.

**WARNING:**
Do not clean the filter with gasoline or petrol.

**NOTE:**
If the filter is damaged, replace it immediately. To replace, contact authorised Betamotor customer service.

**WARNING:**
Never use the vehicle if the air filter is not in place. The infiltration of dust and dirt can cause damage and considerable wear.

**WARNING:**
After every intervention, check that nothing has been left inside the filter box.

---

- Release filter fastener 1

- Pull out air filter 2

**WARNING:**
After every intervention, check that nothing has been left inside the filter box.

Reassemble by performing the operations in reverse order.
**SPARK PLUG**

Keeping the spark plug in good condition will reduce fuel consumption and increase engine performance.

To accede to spark plug, is necessary to take off saddle (page 80) and the fuel tank (page 82).

Examine the distance between the electrodes with a feeler. This distance should be from 0,5÷0,6 mm. If it is not, it may be corrected by bending the earth electrode.

Check as well that there are no cracks in the insulation or corroded electrodes. If so, replace immediately.

When replacing the spark plug, screw it in by hand until it stops, then tighten with a wrench.

⚠ **WARNING:**
Do not check while the engine is hot.
FRONT BRAKE

CHECK THE LEVEL OF THE FRONT BRAKE FLUID

Check the level of the brake fluid through sight A. The level of the fluid should never fall below the mark in the sight.

RESTORING THE LEVEL OF THE FRONT BRAKE FLUID

To restore the level of the brake fluid, loosen the two screws 1, lift cap 2 and add brake fluid until its level is 5 mm below the upper rim of the reservoir.

Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:

The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

⚠️ WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:

- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
BLEEDING THE FRONT BRAKE

To bleed air from the front brake circuit, proceed as follows:

• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the brake lever 2/3 times and keep the lever pressed.
• Unscrew the valve and let the oil drain.
• If air is still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
during this procedure, continuously top up the brake pump thank to replace the oil that is out flowing.
• Remove the tube.
• Replace the rubber cap.
• Close the oil reservoir cap.

Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

WARNING:
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing.
If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
FRONT BRAKE LINING CONTROL

In order to verify the wear condition of front brake is enough to view the caliper from the bottom, where is possible to glimpse the brake lining tails which will have to show a brake of 2 mm in thickness. If the stratum is lesser let’s start replacing them.

NOTE:
Perform the check according to the times shown in the table on page 75.
To replace, contact authorised Betamotor customer service.

BRAKE DISC THICKNESS CONTROL

Periodically verify disc condition. In case signs of damage, veins, or deformations are present, proceed with replacement. Verify disc thickness. The minimum thickness is engraved on the disc. Once the limit is in proximity or has been reached, proceed with brake disc replacement. For replacement, contact an authorised Betamotor after-sales service centre.
REAR BRAKE

CHECK THE LEVEL OF THE REAR BRAKE FLUID

Check the level of the brake fluid through sight A. The level of the fluid should never fall below the mark in the sight.

RESTORING THE LEVEL OF THE REAR BRAKE FLUID

To restore the oil level, top up by means of oil filler cap 1.

Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

🛠️ Wear appropriate protective clothing and protection gloves.

⚠️ Keep coolant out of reach of children.

⚠️ WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:

- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
BLEEDING THE REAR BRAKE

To bleed air from the rear brake circuit, proceed as follows:

• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the brake lever 2/3 times and keep the pedal pressed.
• Unscrew the valve and let the oil drain.
• If air is still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the brake pump thank to replace the oil that is out flowing.
• Remove the tube.
• Replace the rubber cap.
• Close the oil reservoir cap.

Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

WARNING:
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing.
If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
REAR BRAKE LINING CONTROL

In order to verify the wear condition of front brake is enough to view the caliper from the bottom, where is possible to glimpse the brake lining tails which will have to show a brake of 2 mm in thickness. If the stratum is lesser let’s start replacing them.

NOTE:
Perform the check according to the times shown in the table on page 75.
To replace, contact authorised Betamotor customer service.

BRAKE DISC THICKNESS CONTROL

Periodically verify disc condition. In case signs of damage, veins, or deformations are present, proceed with replacement. Verify disc thickness. The minimum thickness is engraved on the disc. Once the limit is in proximity or has been reached, proceed with brake disc replacement.
For replacement, contact an authorised Betamotor after-sales service centre.
CLUTCH CONTROL

CHECK THE LEVEL

To check the oil level in the clutch pump, first remove cover 2. Remove the two screws 1 and take off cover 2 together with the rubber bellows. With the clutch pump in a horizontal position, the level of the oil should be 5 mm below the upper rim. In the case where the level is lower than specified top up.

Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

-wear appropriate protective clothing and protection gloves.

-keep coolant out of reach of children.

⚠️ WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
BLEEDING

To bleed air from the clutch pump, proceed as follows:
• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the clutch lever 2/3 times and keep the lever pressed.
• Unscrew the valve and let the oil drain.
• If air are still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the pump tank to replace the liquid that is out flowing.
• Remove the tube.
• Replace the rubber cap.
Use the liquid indicated on page 13 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

⚠️ Wear appropriate protective clothing and protection gloves.

⚠️ Keep coolant out of reach of children.

⚠️ WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
CHECK AND ADJUSTING OF STEERING PLAY

Periodically check the play in the steering sleeve by moving the fork back and forth as shown in the figure. Whenever you feel play, adjust as described below:

- Loosen the screws 1
- Loosen the screw 2
- Reduce the play by turning nut 3

Tighten the screws to the prescribed torque values.

WARNING:
Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.
OIL FORK

The procedure for changing the oil in the forks is provided only for information. We recommend having the operation performed by a BETAMOTOR authorized workshop.

REMOVING LEGS

To replace, proceed as follows:
• Position the vehicle on the central bike stand.
• Remove the cable gland U-bolt 1.
• Remove the brake caliper 2.
• Remove cap 3, loosen the screws 4, slide the wheel pin out and remove the front wheel.
• Loosen shaft lock screws 5 and take off the slider.

OIL REPLACEMENT

• Place the legs vertically with cap 1 facing upwards. Loosen the upper cap 1.
• Loosen the counter-nut 2 and remove cap 1.

• Extract the spring 3 and overturn the pipe, making the oil escape.

• Move the pumping unit and drain the remaining oil. When the oil has been drained completely, introduce the amount of new oil described in chapter 1.

• Bleed the pumping unit of air, making it rise and fall until complete loading. Introduce the spring and screw the cap 1 until it is completely inserted on the pumping rod. Block the cap to the pumping rod via the counter-nut 2.
• Tighten the cap to the completely extended leg.

**LEGS ASSEMBLY AND PARTS**

Apply the legs to the vehicle and tighten the screws to the torque indicated.

**WARNING:** grease the screws before their application.

**WARNING:** Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.

Apply wheel and wheel bolt.

Apply brake caliper, disc cover and fender.

Tighten brake calliper and U-bolt to the indicated torque, after depositing medium resistance threadlocker.

Place the vehicle on the ground.
Compress and release the fork 3-4 times.

Tighten the wheel bolt and the screws of the foot-leg.

**WARNING:**
Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.

**REAR SUSPENSION LEVERAGE**

In order to guarantee optimal operation and duration over time of the progressive leverage of the rear suspension, it is recommended to periodically check correct tightness of nuts and bolts.

Verify that suspension nuts and bolts are at the indicated torque.
**TYRES**

Only fit tyres approved by BETAMOTOR. Unsuitable tyres can adversely affect the road holding of the vehicle.

- To protect your safety, immediately replace any damaged tyres.
- Slick tyres adversely affect the road holding of the vehicle, especially on wet roads and in off-road riding.
- Insufficient pressure results in abnormal wear and overheating of the tyres.
- The front and rear tyres must have the same tread design.
- Always measure the inflating pressures when the tyres are cold.
- Keep the tyre pressures within the prescribed range.

**CHAIN**

Checking the drive chain periodically to ensure longer chain life. Always keep it lubricated and clean of deposited dirt.

Take special care in preventing the lubricant from coming into contact with the rear tyre or brake disc, otherwise the tyre grip and the action of the brake would be greatly reduced, making it very difficult to control the vehicle.

**CHECK AND ADJUST TIGHTENING CHAIN**

Position the drive on a flat base ensuring stability.

If the chain play exceeds 30÷35 mm tension the chain.
CHECK FOR CHAIN WEAR

Shift into neutral, pull up the upper stretch of the chain with a force of 10 - 15 kg (see figure). Measure the length of 18 links on the lower stretch of the chain. If the length is $\geq 272$ mm, replace the chain. Chains do not always wear evenly. For this reason it is important that the measurement is taken at different points along the chain.

When fitting a new chain, be sure to replace the chainring and sprocket as well. New chains wear more quickly if fitted on old and worn sprockets. After replacing the chain, adjust its tension as described on page 65.
HEADLIGHT

Keep the headlight glass clean at all times (see page 71).
Periodically check the correct angle of the light beam.

REPLACING THE HEADLIGHT BULBS

Release both spring washers and move forward the lamp holder front cowl.

Carefully remove the headlight bulb 1 together with lamp holder. To replace the high beam / low beam, lift the rubber cover 2, release connector, push on the spring 3 and remove the lamp holder and replace the light bulb with a new one. Be careful not to touch the bulb so as not to compromise its efficiency.

To refit, follow the procedure above but in reverse order.

Fasten the lamp holder front cowl to the supporting pins and fix it with the two elastics.

TAIL LIGHT

Keep the tail light glass clean at all times (see page 71).

The LED tail light is sealed. In the case of burnout of one or more LEDs it is necessary to replace the entire group.

To replace, contact authorised Betamotor customer service.
**Battery**

Battery is located under the saddle and requires no maintenance.

Keep the battery terminals clean. If necessary, protect them with a thin film of acid-free grease.

![Battery Image]

**WARNING:**
The battery contains hazardous substances:
- Keep the battery out of the reach of children.
- Keep sparks and open flames away from the battery.
- Charge the battery only in well-ventilated areas, keeping it away from flammable materials. Use only chargers suitable for charging lithium-ion batteries.
- Do not attempt to charge fully exhausted batteries with a voltage lower than the minimum 9V. In this case, dispose of the battery according to applicable regulations.
- Do not remove the protections.
- When installing the battery, be sure to observe the polarity of the terminals.

**Battery Removal**

Shut off all electrical users and stop the engine.
Remove the saddle (page 80).

FIRST remove the cap 1 of the negative pole and disconnect the negative lug 2 (black) from the negative pole.

![Battery Removal Image]
THEN remove the cap of the positive pole 3 and disconnect the positive lug 4 (red) from the positive pole (+).

Release the rubber band 5.

Remove the battery.

**BATTERY ASSEMBLY**

When fitting the battery, insert it with the terminals as shown in picture.

Reattach the rubber band 5.

FIRST Connect the positive lug 4 (red) to the positive pole (+) of the battery by pushing the protective cap 3 in its position.

THEN secure the negative lug 2 (black) to the negative pole (-) of the battery by bringing the relative protective cap 1 in position.

Refit the saddle (page 80).

**INACTIVITY**

If the vehicle is not going to be used for a long time:
- remove the battery (page 68).
- charge with an adequate charger (page 70).
- store the battery in a dry place. The ideal temperature for storing the lithium-ion battery is 20°C.
**CHARGING THE BATTERY**

Check the battery charge using a multimeter or by pressing the “TEST” button on the battery

- Voltage < 9V or “LOW”:
  - Do NOT charge the battery
  - Replace the battery with a new equivalent one
- Voltage < 12.4V or “MED”:
  - Charge the battery

Guidelines to charge the battery:

⚠️ Use ONLY chargers suitable for charging lithium-ion batteries.

- Maximum charging voltage: 14.4V
- Maximum charging current: 3.0A
- Maximum charge time: 12h

Recharge the battery regularly with a specific battery charger when the vehicle is not used for more than 6 months.

Ideal temperature for charging lithium ion batteries: 20 °C.

**FUSES**

To access the fuse, remove the saddle (page 80).

**Fuse 1**: in the event of a blown fuse, the services listed in the table are not operational:

<table>
<thead>
<tr>
<th>Rear lights</th>
<th>Stop</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front lights</td>
<td></td>
</tr>
<tr>
<td>Tachometer and control lights</td>
<td></td>
</tr>
<tr>
<td>Turn lights</td>
<td></td>
</tr>
<tr>
<td>Klaxon</td>
<td></td>
</tr>
<tr>
<td>Electric fan (optional)</td>
<td></td>
</tr>
</tbody>
</table>

**Fuse 2**: in the event of a blown fuse, the vehicle stops/does not start.

**Fuse 3**: in the event of a blown fuse, the vehicle does not start/stops.

Three spare fuses come with the kit accompanying the vehicle.

⚠️ A blown fuse should only be replaced with another of the same type. Should the new fuse also burn out when fitted, immediately contact a specialized BETAMOTOR dealer.
CLEANING THE VEHICLE

GENERAL PRECAUTIONS

⚠️ WARNING: Do not clean your vehicle with a high-pressure device with a strong jet of water. Excessive pressure can reach electrical components, connectors, flexible cables, bearings, etc and can damage or destroy them.

⚠️ WARNING: Wash motorbikes frequently with cold water that are used near the sea (salty air) and on roads subject to salt spreading in winter. Cover with a film of oil or silicone spray unpainted parts and the most exposed parts such as wheels, forks and swingarm. Do not treat rubber parts and brakes.

When cleaning, avoid direct exposure to sunlight.

Close off the exhaust system to prevent water from entering.

⚠️ Avoid directing the jet of water onto the air filter box cover and the throttle body.

WASHING MODE

Use water jet to soften the dirt and mud accumulated on the paintwork, then remove them with a soft bodywork sponge soaked in water and shampoo. Subsequently rinse well with water, and dry with air and cloth or suede leather.

Detergents pollute water. Always wash the vehicle in areas equipped for collection and purification of the washing liquids.

AFTER WASHING

Proceed to the emptying of the filter box using the appropriate ventilation and drying.

After cleaning, ride a short distance until the engine reaches operating temperature.

⚠️ ⚠️ WARNING: braking effect is reduced with wet brakes. Operate the brakes cautiously to allow them to dry.

Push back the handlebar control covers, so that water can evaporate.

When the bike is completely dry and cooled down, lubricate all moving parts.

Treat all plastic and painted components with non-aggressive detergents or products that are specific for the care of the motorcycle.
To prevent malfunction of the electrical system, treat electric contacts and switches with electrical contact spray.

⚠️ ATTENTION: any oxidation of electrical contacts may result in serious malfunctioning to the power supply system.

Specifically, treat the battery poles as described on page 68 and pay particular attention to what is contained here below.

**ELECTRICAL CONNECTOR MAINTENANCE**

Disconnect the connectors listed below, blow compressed air on the connector both on the system and on the component side, and treat electrical contacts and switches with spray for electrical contacts.

**CONTROL UNIT CONNECTOR**

The connector is positioned as indicated in figure.

To access it, remove the air filter cover side (page 81).

To remove the connector one must:

1) press the lock device;
2) rotate the safety device as shown;
3) remove the connector.

For re-assembly, proceed opposite the above-mentioned order.

**AIR PRESSURE AND TEMPERATURE SENSOR**

Remove the tank (page 82).

The connector is positioned as indicated in figure.

1) press the lock device;
2) Pull the connector upwards.

For re-assembly, proceed opposite the above-mentioned order.

Attention: at the end of the operation ensure that the connector is blocked.
A few simple operations should be performed to keep the vehicle in good condition whenever it is to remain inactive for a long period (e.g. during the winter):

- Thoroughly clean the vehicle.
- Reduce the tyre pressures by approximately 30 percent, and if possible raise the tyres off the ground.
- Cover the unpainted parts, excepting the brakes and the rubber parts, with a film of oil or spray silicone.
- Remove the battery (page 68) and follow the instructions for inactivity (page 69) and recharging (page 70).

AFTER PROLONGED INACTIVITY

- Reinstall the battery.
- Restore the tyre inflating pressures.
- Check the tightening of all the screws having an important mechanical function.

The required engine maintenance is strongly depending on the level of use and on the accordingly done periodic checks and service.
The mentioned maintenance intervals are for the normal use of the vehicle, subject to the condition that the engine was never running under extraordinary conditions and the periodic service was done accurately.

CHAPTER 5 REMOVING AND INSTALLING SUPERSTRUCTURES

CONTENTS
Removing and installing of the saddle ................................................................. 80
Removing and installing air filter cover panel ................................................... 81
Removing and installing of the tank ..................................................................... 82
REMOVING AND INSTALLING OF THE SADDLE

Press button 1.

Remove the saddle towards the rear of the motorcycle.

To re-assemble:
Insert the cavity 1 of the saddle in slot 2.

Press the saddle down in the middle and at the same time, push it forwards until the bayonet joint engages in its seat.
WARNING
Make sure the bayonet joint 3 is firmly inserted into the button lock.

REMOVING AND INSTALLING AIR FILTER COVER PANEL

Remove the saddle (page 80).
Grab the side panel in the front side and pull out.
To refit insert the tabs 1 into their slots.
Slide the side panel toward the vehicle.
REMOVING AND INSTALLING OF THE TANK

Remove the saddle (page 80).

Remove the two screws fastening the tank to the frame and the screw (one per side) securing the fairing to the radiator.

Disconnect the fuel hose by pressing the appropriate button of the quick coupling.

Lift the tank.

Disconnect the electrical connector 1 and 2.

Remove the tank with its fairings.

Reassemble proceeding in the reverse order.

WARNING
For safety reason, the fuel flow is stopped when the connector is even partially engaged. Make sure that the fuel quick release fittings are well inserted.

1) Registro freno compressione: 17 click da tutto chiuso

2) Registro freno estensione: 12 click da tutto chiuso

1) Réglage du frein en compression: 17 déclenchements de la position, tout fermé

2) Réglage du frein en extension: 12 déclenchements de la position, tout fermé

1) Einstellung der Druckstufe: 17 Klicks von der Position vollständig geschlossen

2) Einstellung der Zugstufe: 12 Klicks von der Position vollständig geschlossen

1) Afstelling rem compressie: 17 kliks vanaf volledig dicht

2) Afstelling rem extensie: 12 kliks vanaf volledig dicht

1) Regulación del freno en compresión: 17 disparos desde la posición totalmente cerrada.

2) Regulación del freno en extensión: 12 disparos desde la posición totalmente cerrada.

Hydraulic upside-down fork (Ø48 mm shafts) pressurized cartridge spring K 4,6 oil type LiquiMoly SAE5 oil quantity 388cc (each leg) 224cc (cartridge)
**MANUTENZIONE FORCELLA**

- Coppia serraggio dei doppie viti di estrazione: **20Nm**
- Coppia serraggio dei doppie viti di estrazione: **17Nm**
- Coppia serraggio dei doppie viti di estrazione: **12Nm**
- Coppia serraggio dei doppie viti di estrazione: **50Nm**
- Coppia serraggio dei doppie viti di estrazione: **10Nm**

---

**ATTENZIONE:**

Il serraggio delle viti deve essere eseguito regolando la chiave dinamometrica alla coppia stabilita ed eseguendo il serraggio in maniera ripetutiva, fino a raggiungere la coppia stabilita.

---

**ATTENTION:**

Le serrage des vis doit être effectué en réglant la clé dynamométrique selon le couple défini et en effectuant le serrage de manière répétée, jusqu'à atteindre le couple défini.

---

**ACHTUNG:**

Die Schrauben müssen mit einem Drehmomentschlüssel unter Beachtung des angegebenen Werts angespannt werden. Das Anziehen muss so lange wiederholt werden, bis das Drehmomentstabilität erreicht ist.

---

**ATTENZIONE:**

Het schroeven moeten vastgedraaid worden door de momentsleutel te regelen op het voorgeschreven aanhaalmoment en in meer momентаen vast te draaien, tot het aanhaalmoment bereikt is.
