Thank you for choosing Beta as your next Motorcycle! All of us at Beta USA would like to say Thank You for your purchase and we hope you will enjoy many years of fun and excitement with your new Beta.

Our service email line is service@betausa.com if you should have any questions or concerns.

Sincerely,
Tim Pilg and the entire Beta USA staff
IMPORTANT

We recommend you to check all the tightenings after the first one or two hours’ ride over rough ground. Special attention should be paid to the following parts:

• rear sprocket
• ensure that the footrests are properly fixed
• front/rear brake levers/calipers/discs
• check that the plastics are properly fastened
• engine bolts
• shock absorber bolts/swingarm
• wheel hubs/spokes
• rear frame
• pipe connections
• tensioning the chain

IMPORTANT

In the event of interventions on the vehicle, contact Betamotor after-sales service.

OPERATING INSTRUCTIONS

• The vehicle must be accompanied by: number-plate, registration document, tax disc and insurance.
• Any modifications of the engine or other parts are punishable by severe sanctions including the confiscation of the vehicle.
• To protect your safety and that of others, always drive carefully and with your helmet on and always keep low beams on.
• Do not sit on the vehicle when it is on its stand.
• Do not start the engine in closed places.

WARNING
Any modifications and tampering with the vehicle during the warranty period exempt the manufacturer from all responsibility and invalidate warranty.

SYMBOLS

SAFETY/ATTENTION
Failure to respect information marked with this symbol can entail a personal hazard.

INTEGRITY OF THE VEHICLE
Failure to respect information marked with this symbol can entail serious damage to the vehicle and termination of the warranty.

FLAMMABLE LIQUID HAZARD

MANDATORY TO WEAR PROTECTIVE CLOTHING
Use of the vehicle is subject to wearing specific protective clothing and safety footwear.

PROTECTIVE GLOVES MANDATORY
To perform the operations described, it is mandatory to wear protective gloves.

FORBIDDEN TO USE NAKED FLAMES OR POSSIBLE UNCONTROLLED IGNITION SOURCES

NO SMOKING

DO NOT USE MOBILE PHONE

CORROSIVE SUBSTANCES HAZARD
Liquids marked with this symbol are highly corrosive: handle with care

POISONING HAZARD
RIDING SAFETY

• Observe the Highway Code.
• Always wear approved personal protective equipment.
• Always ride with the low beam on.
• Always keep the crash helmet visor clean.
• Avoid wearing garments with hanging ends.
• Do not keep sharp or brittle objects in your pockets while riding.
• Properly adjust the rearview mirrors.
• Always ride in a seated position, with both hands on the handlebars and both feet on the footrests.
• Never ride abreast with other vehicles.
• Do not tow and avoid being towed by other vehicles.
• Always keep a safe distance from other vehicles.
• Do not start off while the vehicle is on its stand.
• Avoid swaying and wheelies as they are extremely dangerous for your own and other people’s safety as well as for your vehicle.
• Always apply both brakes on dry roads with no gravel and sand. Using one brake may be dangerous and cause uncontrolled skidding.
• To reduce the braking distance, always apply both brakes.
• On wet roads and in off-road riding, drive with care and at moderate speed. Take special care in applying the brakes.

VEHICLE IDENTIFICATION DATA

FRAME IDENTIFICATION
Frame identification data A are stamped on the right side of the steering head tube.

ENGINE IDENTIFICATION
Engine identification data B are stamped in the area shown in the figure.

TOOLS KIT
The following items are supplied as standard: operation, maintenance manual, tool kit and the cable adapter to connect the CAN socket to a scantool.

Inside the battery compartment you will find the hexagon wrench 3 and the socket wrench (8 mm). To gain access remove the saddle (page 80).
FAMILIARIZING WITH THE VEHICLE

MAIN PARTS:
1 - Fuel tank
2 - Tank cap
3 - Silencer
4 - Rear shock absorber
5 - Headlight
6 - Rear light
7 - Side stand
8 - Fork
9 - Rider’s footrests
10 - Lower bumper
     (Bumper kit)
11 - Saddle
12 - Engine
13 - Front mudguard
14 - Number-plate holder
15 - Side panel air filter
     cover
16 - Front side panel
17 - Rear side panel
18 - Rear mudguard

MAIN PARTS

FUEL TANK CAP

To open the fuel tank cap, turn it anticlockwise.

To close the fuel tank cap, set it on the tank and screw it clockwise.

FUEL COCK

Fuel cock has three positions:

OFF: fuel supply closed. Fuel cannot pass from the tank to the carburettor.

ON: fuel supply enabled. Fuel flows from the tank to the carburettor. The tank empties until it reaches the reserve level.

RES: reserve fuel supply. Fuel flows from the tank to the carburettor and the tank empties completely.
**STARTER**
The starter lever is located on the carburettor.

To operate the choke pull it upward.

**MIXER OIL TANK CAP**
The mixer oil tank cap is located under the saddle.

To gain access remove the saddle (page 80).

To open the fuel tank cap turn it anticlockwise.

To close the fuel tank cap, set it on the tank and screw it clockwise.

**CLUTCH LEVER**
Clutch lever is fitted to the left-hand side of the handlebars.
LH SWITCH
The dip and service switch is located on the left side of the handlebar and is composed as follows:
1 - Horn button;
2 - Dip switch:
   - parking lights and high beam;
   - parking lights and low beam;
3 - Flash-to-pass button;
4 - Turn signal light switch: shifting lever left or right activates the left or right indicators. When released, the lever returns to the central position. Press it to turn the indicators off.

RH SWITCH
Starter button 5 is located on the right-hand side of the handlebars and operate the electric engine starter. Press and hold the button until the engine starts. Do not press the button 5 while the engine is running.

The button 6 turns off the engine.

Caution:
Before starting the engine, make sure the 6 button is ON.

FRONT BRAKE LEVER AND GAS CONTROL
The front brake lever A and the gas throttle B are located on the right side of the handlebar.
GEAR CHANGE LEVER
Gear change lever is fitted to the left side of the engine. The positions corresponding to the different gears are shown in the figure.

BRAKE PEDAL
Brake pedal is located in front of the right-hand footrest.

The rear brake is operated by pressing down the pedal.

KICKSTART - OPTIONAL
Kickstart is fitted to the right-hand side of the engine. The upper part of the kickstart can be oriented.

SIDE STAND
Press down side stand with the foot and lean the vehicle against it. Ensure that the ground is solid and the vehicle stands steadily.
If the vehicle is used off-road, the closed stand can be further fastened by means of rubber band.

KEYS
The vehicle is supplied with two keys (one key and its spare).

STEERING LOCK
To activate the steering lock:
- turn the handlebar counter-clockwise;
- push the key and turn counter-clockwise;
Remove the key from this position.
To deactivate the steering lock:
- turn the key clockwise;
- turn the handlebar clockwise;
From this position, the handlebar is free to move, the key can be removed.

WARNING: do not keep the spare key inside the vehicle, but in a safe place. We suggest you note the code number stamped on the keys. In this way you can obtain a duplicate.

3.3  Telltales
4  Coin battery

1 GENERAL INFORMATION

The dashboard integrates these main blocks:

- LCD display for showing all required information
- 2 pushbuttons
- Coin battery

2 OPERATING CONDITION

Standard supply voltage: 10 to 16V
Minimum supply voltage w/o reset: 6.5V
3 GENERAL CHARACTERISTICS

3.1 DASHBOARD START-UP PROCESS

The dashboard do some start-up process when is turned ON. There are three different wakes up events for starting the dashboard.

This start-up process consists in turning ON the LCD backlight and the LCD will show all the segments during 2 seconds. After the start-up process, dashboard is kept ON during 30 seconds if there are no events as pushbutton press, speed signal or engine ON.

3.1.1 WAKE UP EVENTS

3.1.1.1 Motorbike power supply is activated

When the power supply of dashboard is activated (e.g. when engine is turned on), the dashboard does the normal start-up process and is kept ON while

3.1.1.2 Wheel revolution

If the motorbike generated a speed pulse, the dashboard will be turned ON doing the normal start-up process. After the start-up process the dashboard will display the normal mode, and will be ON during 30 seconds if no speed pulse is generated.

3.1.1.3 Button is pushed

If one or both buttons are pushed the dashboard will be turned ON doing the start-up process. After the start-up process the dashboard will display the normal mode, and will be ON during 30 seconds if no pushbutton is pressed.

3.2 LCD DISPLAY

Dashboard is equipped with a LCD display for showing following information:

- Speed
- SoC vehicle battery
- Odometer (distance or ride time)
- Trip TOTAL-A-B (distance or ride time)
- Clock

Each information/data is refreshed independently at different rate, depending on information type and variability of this information.
3.2.1 LCD GENERAL CHARACTERISTICS

Each information/data is refreshed independently at different rates, depending on information type and variability of this information.

3.2.2 SPEED

Dashboard computes and displays the motorbike speed on LCD display. Speed information can be obtained from:
Dedicated digital input for measuring speed sensor frequency.

3.2.2.1 Speed digital input configuration

Configuration parameters for speed input and speed visualization.

Dimensions displayed: [km/h or mph]
Minimum speed indication: [5 km/h]
Speedometer advance: [5 %]

Wheel parameters:
• Wheel perimeter selectable between 2 values:
  • Default wheel perimeter value: (enduro) 2100mm
  • 2nd wheel perimeter value: 1811mm
• Pulses per turn: [1 pulses/turn]

3.2.2.2 Speed LCD

Speed and speed units are permanently displayed (km/h or mph).
km/h display range: 0 to 199km/h.
mph display range: 0 to 199mph.
Leading zeros suppressed.
Following picture shows LCD displaying speed in km/h and mph:
3.2.3 ODOMETER
Dashboard provides an odometer and is displayed on LCD display. This option can be displayed scrolling by “MODE” button.
6 digits and “ODO” icon lighted.
Leading zeros not suppressed.
Display range from 000000 to 999999 km or miles. If odometer is greater than 999999 km, odometer will be fixed as 999999 km.
Minimum display unit: 1 km or mile.

3.2.4 TRIP A
Dashboard provides 2 trips and is displayed on LCD display. This option can be displayed scrolling by “MODE” dashboard button.
4 digits (3digits + decimal point + 1 digit), “TRIP” icon lighted and “A” on the left.
Leading zeros suppressed.
Display range from 0.0 to 999.9 km or miles.
Trip A counter counts from 0 up to 999.9 and then rolls over to 0 and continue counting.
Minimum display unit: 0.1 km or miles.
Trip A reset by pressing “SET” button more than 2 seconds.
Trip A display the Trip A ride time pressing “SET” button less than 2 seconds. Ride time is showed as an hour decimal number. Examples: 30 min is 0.5 or 1h20min is 1.3.
3.2.5 TRIP B

This option can be displayed scrolling by “MODE” dashboard button. 4 digits (3 digits + decimal point + 1 digit), “TRIP” icon lighted and “B” on the left. Leading zeros suppressed. Display range from 0.0 to 999.9 km or miles. Trip B counter counts from 0 up to 999.9 and then rolls over to 0 and continue counting. Minimum display unit: 0.1 km or miles. Trip B reset by pressing “SET” button more than 2 seconds. Trip B display the Trip B ride time pressing “SET” button less than 2 seconds. Ride time is showed as an hour decimal number. Examples: 30 min is 0.5 or 1h20min is 1.3.

![Trip B Display](image)

3.2.6 CLOCK

Dashboard provides a clock and is displayed on LCD display. Time is obtained from internal crystal quartz and is kept while dashboard is connected to coin battery.

<table>
<thead>
<tr>
<th>Clock format</th>
<th>If units of measure are km 24h</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>If units of measure are mi 12h</td>
</tr>
</tbody>
</table>

![Clock Display](image)
3.2.7 RIDE TIME
Dashboard provides a Ride Time and is displayed on LCD display. Time is obtained from internal crystal quartz and is kept with a push buttons. When the motorbike is turned on the ride time starts again.

3.2.8 UNIT OPTION DISPLAY
Dashboard provides the possibility to change the units and be displayed.

3.2.9 WHEEL LENGTH DISPLAY
Dashboard provides the possibility to change the wheel length and be displayed. The length can be selected between 2 fixed values:
2100mm (enduro)
1811mm

Pushing mode and set more than 2 seconds wheel length is saved. “Saved” will be displayed during 1 second on Dashboard.
3.2.10 MOTORBIKE BATTERY LEVEL

Dashboard displays level of voltage of battery power supply:
Relationship between bars and level of voltage:

<table>
<thead>
<tr>

<td>🛠️</td>
</tr>
</tbody>
</table>
Power +12V are provided to the dashboard only when the bike is turned on (regulator line).

**Blinkers LED**

The system activates the indicator in synchrony with the activation of the direction indicators.

**High beam LED**

The system activates the indicator in synchrony with the activation of the high beam.

**Oil reserve LED**

**MIL LED**

Indicates a fault in the engine management system. In case of prolonged lighting, consult an authorised Betamotor dealer as soon as possible. Following the initial check of the instrument, the light remains active for another two seconds.

### 4 COIN BATTERY

Dashboard is equipped with a coin battery (1) for keeping time when motorbike is off. Coin size: CR2032.
CHECKS BEFORE AND AFTER USE

For safe driving and long vehicle life you should:
1 Check the integrity of the oil pipe connecting the intake manifold to the electronic dosing.
2 Check all fluid levels.
3 Check the correct operation of the brakes and brake pad wear (page 56).
4 Check pressure, general condition and thickness of tread (page 67).
5 Check that the spokes are properly tightened.
6 Check the tensioning of the chain (page 67).
7 Check the adjustment and the operation of all the cable controls.
8 Inspect all the nuts and bolts.
9 With the engine running, check the operation of the headlight, the rear and brake lights, the indicators, the warning lights and the horn.
10 Wash the motorcycle thoroughly after off-road use (page 73).

RUNNING IN

The running-in period lasts approximately 15 hours, during which it is advisable to:
1 Make the first refuelling with a mixture of 1%.
2 Use the oil indicated on page 16 in the “Recommended lubricants and liquids” table.
3 During the first 3 hours of operation the engine should only be used to approximately 70 percent of its power. In addition, the engine speed should not exceed 7,000 rpm.
4 For the next 2 hours of operation the engine should only be used to about 90 percent of its power.
5 Use the vehicle after properly warming up the engine.
6 Avoid travelling at constant speed (changing the speed causes the different components to bed in evenly and more quickly).

This procedure should be followed each time piston, piston rings, cylinder, crankshaft or crankshaft bearings are replaced.

WARNING
Replace the transmission oil after the first 3 hours or after 15 l. of mixture.
REFUELLING

Use unleaded petrol.

Fuel tank capacity is shown on page 10.

To refuel open the tank cap (page 18).

After refuelling, screw the cap back and tighten securely.

**WARNING**
The refuelling should be performed with the engine off.

**WARNING:**
Fire hazard. Fuel is highly flammable.

- Always stop the engine when refuelling and keep open flames and lighted cigarettes away.
- Do not top up fuel while using a mobile phone.

Refuel in an open well ventilated area.

Pay special attention so that the fuel does not come into contact with hot parts of the vehicle. Immediately clean up any spilled fuel.

- **WARNING:** Risk of poisoning.

Fuel is poisonous liquid and a health hazard.

- Fuel must not come into contact with the skin, eyes, and clothing. Do not breathe in the fuel vapours. If contact occurs with the eyes, rinse immediately with plenty of water and seek medical advice. If contact occurs with skin, immediately clean contaminated areas with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that is contaminated with fuel.

- **WARNING:** Environmental pollution hazard.

The fuel must not contaminate the ground water, the ground, or the sewage system.
**OIL MIXER REFUELLING**

To refuel open the tank cap (page 19).

Fuel tank capacity is shown on page 10.

After refuelling, screw the cap back and tighten securely.

Use the oil indicated on page 16 in the “Recommended lubricants and liquids” table.

**STARTING THE ENGINE**

Move the fuel tank valve in **ON** or **RES** position (page 18).

Check that the gears are in neutral (page 21).

Pull the clutch lever (page 19).

Close the side stand (page 21).

**WHIT ELECTRIC STARTER** (page 20):
Push the button until the engine starts.
Do not press the button while the engine is running.

**COLD STARTING**:
Operate the starter (page 19), start the vehicle, wait a few seconds, then move the starter back to its starting position.

**ENGINE SHUT-DOWN**

To shut-down the engine press the button on the left switch unit (page 20).

**NOTE:**
With the engine off, make sure the fuel cock is set to OFF (page 18).

ADJUSTMENTS

KEY TO SYMBOLS

![Tightening torque](image)

![Threadlocker Medium](image)

BRAKES

FRONT BRAKE

The front brake is disk type with hydraulic control.

The home position of brake lever 2 can be adjusted by means of screw 1.

REAR BRAKE

The home position of brake pedal 3 can be altered by turning adjusting screw 5 after loosening the counternut located under dust cap 4. Loosen the counternut and turn the adjusting screw until the desired height is obtained. Retighten the counternut after completing the operation.

CLUTCH

The adjustment screw 6 allows adjustment of the distance of lever 7 from the knob. The empty run is recovered automatically.
**ADJUSTMENT OF GAS CLEARANCE**

The throttle control cable should always have a 3-5 mm play. In addition, the idle speed should not change when the handlebars are fully rotated to the left or right. Push back protective cap 1. Loosen counternut 2 and turn adjusting screw 3. Tighten the counternut and check that the throttle twist grip turns smoothly.

---

**ADJUSTING THE IDLE SPEED**

Idling adjustment greatly affects the appropriate start-up and the accelerator response. Idling is adjusted through adjustment screw 1 and air adjustment screw 2. Adjustment screw 1 adjusts the basis position of the gas valve. Turn the screw clockwise to increase the rotation conditions and counterclockwise to diminish it. The air adjustment screw 2 adjusts the quantity of which is mixed to the fuel for idling. If the screw is turned counterclockwise, the quantity of air increases (thin mix), if turned clockwise, the quantity of air diminishes (fat mix).
To properly adjust the idle speed, follow these steps:

- Tighten the air adjustment screw no. 2 fully and then loosen it up to the value described in the carburetor setting table (page 12).
- Warm the engine for approx. 5 minutes, until the operational temperature is attained.
- Slowly turn the air adjustment screw 2 clockwise, until idling starts diminishing.
- Mark the position, then slowly turn the air adjustment screw no. 2 counterclockwise, until idling decreases again.
- Adjust the screw between these two positions, at the highest idling point.

If a remarkable increase in the rpm occurred during the adjustment above, idling is to be reduced and taken back to the normal level, and then execute the above procedure.

If no satisfactory results are obtained after the procedure, this may be due to an incorrect slow-running jet.

If the air adjustment screw has been thoroughly tightened, but the rpm have not varied, a lower size slow-running jet is to be used.

Execute the adjustment procedure again after replacing the jet.

**NOTE:**
The correct idling should be between 1500 and 1600 rpm.

**CARBURETOR SETTINGS ACCORDING TO THE WORKING CONDITIONS**
See the following tables to adjust the carburetor settings according to ambient temperature and altitude.

EXHAUST VALVE CONTROL ADJUSTMENT

ATTENTION! The vehicle is provided with an exhaust valve whose fine tuning is performed during the final try-out of the engine. The position of adjustment valve 1 must not be modified for any reason.

For any adjusting, please contact Betamotor’s Authorized Service Network.

HANDLEBAR ADJUSTMENT

U-BOLT POSITION ADJUSTMENT

The lower bracket 1 can be mounted in correspondence of the holes nr. 2, 3 or 4 respectively.

To adjust the position of the u-bolt remove the screws shown in the figure.

Remove the handlebar.

Remove the screws 5.

Position the U-bolt according to requirements.

At the end refit the screws 5 after the application of thread lock fluid and tighten to the torque indicated.
Apply the handlebar.

Apply the top u-bolt.

Refit the screws 6. Tighten to the torque indicated.

ADJUSTMENT OF THE HANDLEBAR POSITION

The handlebar can be adjusted by rotating it back and forth.

To adjust the handlebar loosen screws 1.

Position the handlebar according to requirements.

Tighten to the torque indicated.

ADJUSTING FORK

ADJUSTING THE REBOUND DAMPER

The hydraulic rebound damper determines the behaviour of the telescopic fork during extension and can be adjusted by means of screw A. Turning the screw clockwise increases the action of the rebound damper; turning it anticlockwise decreases the action of the rebound damper.

For standard calibration, refer to page 11.

ADJUSTING THE SPRING PRELOAD

Spring preload is adjusted by means of screw B. Turning clockwise will increase the preload, while rotating counter-clockwise decreases the preload.

For standard setting, refer to page 11.
SHOCK ABSORBER
ADJUSTING THE REBOUND DAMPER
Turn screw A to adjust the hydraulic rebound damper.

For adjustment refer to the table on the side. For standard setting, refer to page 11.

<table>
<thead>
<tr>
<th>Increase braking effect</th>
<th>Decrease braking effect</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Increase" /></td>
<td><img src="image" alt="Decrease" /></td>
</tr>
</tbody>
</table>

ADJUSTING THE HYDRAULIC COMPRESSION DAMPER

Turn knob A to adjust the hydraulic compression damper.

For adjustment refer to the table on the side. For standard setting, refer to page 11.

<table>
<thead>
<tr>
<th>Increase braking effect</th>
<th>Decrease braking effect</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Increase" /></td>
<td><img src="image" alt="Decrease" /></td>
</tr>
</tbody>
</table>
ADJUSTING THE SPRING PRELOAD

To adjust the spring preload, use the procedure described below:

Loosen the locking dowel A.

Turn the ring nut B until you reach the desired preload.

Lock the locking dowel A.

For standard setting, refer to page 11.

Note: for movement of the rings use a specific sector key with square pin.

STATIC SAG LOAD TEST

To verify the static sag of the shock absorber proceed as follows:

- Place the motorcycle on the work stand.
- Measure the vertical distance between the rear wheel axle and a reference point on the rear fairings.
- Write down the dimension $H_1$.
- Remove the work stand.
- Keep the motorcycle in vertical position and measure again the distance between the wheel axle and the reference point previously established.
- Write down the dimension $H_2$.

Verify that the value of the static compression $X = H_1 - H_2$ matches the one shown on page 11. Otherwise, perform the adjustment of the spring preload as described above.

ENGINE OIL

CHECK THE LEVEL
Hold the vehicle upright.
Position the drive on a flat base ensuring stability.

Remove the inspection cap 1.

The oil level must arrive to the lower edge of check hole.

Otherwise restore the oil level through plug 2.

Use the oil indicated on page 16 in the “Recommended lubricants and liquids” table.

REPLACEMENT
Always perform the replacement when engine is hot:
- Position the drive on a flat base ensuring stability.
- Remove the engine casing by loosening the screws shown in the figure.
- Place a container under the engine.

WARNING:
Hot oil can cause severe burns!
- Unscrew filler plug 1 and drain plug 2.
- Drain all the oil from the crankcase.
- Place the cap 2 and tighten to specified torque.

Pour in the quantity of liquid indicated on page 10.
Use the oil indicated on page 16 in the “Recommended lubricants and liquids” table.

Screw on filler cap 1 again.

WARNING:
Dispose of used oil in compliance with the regulations in force.

LIQUID COOLANT

CHECK THE LEVEL

Keep the vehicle in vertical position relative to the ground.

The level of the coolant must be checked when the engine is cold. Use the following procedure:

- Unscrew cap 1 and ensure that the liquid is visible in the lower portion of the loading tube.

- In the case in which the liquid is not visible remove the vent screw 2 and proceed topping up.

- At the end of operation refit the filler cap and the vent screw.

Use the oil indicated on page 16 in the “Recommended lubricants and liquids” table.

WARNING:
Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!
WARNING:  
Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

Avoid any direct contact of the coolant with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice;
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with coolant.

If coolant is swallowed, contact a doctor immediately.

REPLACEMENT  
Keep the vehicle in vertical position relative to the ground.

Replacement of the coolant must take place when the engine is cold.

- Unscrew cap 1.
- Place a container under screw 2.
- Unscrew the screw 2.
- Drain the liquid.
- Tighten screw 2 applying the specific washer.
- Unscrew drain screw 3.

- Proceed to filling.

- Reapply the loading cap and the bleeding screw.

The amounts of liquid are shown on page 10.

Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:
Never unscrew the filler cap of the radiator when the engine is hot. Danger of burning!

⚠️ WARNING:
Dispose of used liquid in compliance with the regulations in force.

⚠️ WARNING:
Wear appropriate protective clothing and protection gloves.

⚠️ Keep coolant out of reach of children.

Avoid any direct contact of the coolant with skin, eyes or clothing. If this happens:

- with the eyes, rinse immediately with plenty of water and seek medical advice;
- with skin, Immediately clean contaminated areas with soap and water Change clothing that is contaminated with coolant.

If coolant is swallowed, contact a doctor immediately.
Air Filter

Check after every ride.

Removing and Installing Air Filter

To access the filter is necessary:
• Remove the saddle (page 80).
• Pull the cover air filter (page 81).

• Release filter fastener 1.

• Pull out air filter 2.

Warning:
After every intervention, check that nothing has been left inside the filter box.

Note:
If the filter is damaged, replace it immediately.
To replace, contact authorised Beta-motor customer service.

Warning:
Never use the vehicle if the air filter is not in place. The infiltration of dust and dirt can cause damage and considerable wear.

Warning:
After every intervention, check that nothing has been left inside the filter box.

Reassemble by performing the operations in reverse order.
**SPARK PLUG**

Keeping the spark plug in good condition will reduce fuel consumption and increase engine performance.

To perform the check, just extract the spark plug cap and unscrew the spark plug by means of the provided wrench.

Carefully clean the electrodes using a wire brush. Blow the spark plug with compressed air to prevent any residues from getting into the engine.

Examine the distance between the electrodes with a feeler. This distance should be from 0.7 - 0.8 mm. If it is not, it may be corrected by bending the earth electrode.

The spark plug may appear:  
- black [ ] “fat” carburation  
- light brown [ ] appropriate carburation  
- white [ ] “thin” carburation  

Check as well that there are no cracks in the insulation or corroded electrodes. If so, replace immediately.

Lubricate the spark plug thread, and then (when the engine is cold) screw in the spark plug by hand to its abutting end. Finally tighten the spark plug with the spanner.

**NOTE:**  
It is recommended to always use the spark plugs listed on page 12.

**WARNING:**  
Do not check while the engine is hot.
CARBURETTOR

DRAINING THE CARBURETTOR FLOAT CHAMBER

If the carburettor tank needs to be emptied, proceed as described.

Remove the chain protection 1, close the tank tap and put a cloth under the carburettor, so that you can collect the running out fuel.

Open the drain screw 2 to drain the fuel.
Close the drain screw.
Apply the chain protection and tighten the screws at 10Nm.

WARNING:
Follow action on a cold engine.

WARNING:
Fire hazard. Fuel is highly flammable.

Always stop the engine when refuelling and keep open flames and lighted cigarettes away.
Refuel in an open well ventilated area.

Immediately clean up any spilled fuel.
WARNING: 
Risk of poisoning!
Fuel is poisonous liquid and a health hazard.

WARNING: 
Wear appropriate protective clothing and protection gloves.

Fuel must not come into contact with the skin, eyes, and clothing. Do not breathe in the fuel vapours. If contact occurs with the eyes, rinse immediately with plenty of water and seek medical advice. If contact occurs with skin, immediately clean contaminated areas with soap and water. If fuel is swallowed, contact a doctor immediately. Change clothing that is contaminated with fuel.

WARNING: 
Environmental pollution hazard! The fuel must not contaminate the ground water, the ground, or the sewage system.

CHECKING THE FLOAT LEVEL

Remove the carburettor from the vehicle after following the procedure for emptying the carburettor bowl (page 73).

Remove the float chamber.

Keep the carburettor on a 60° approx. inclined, so that float leans on the needle valve without pressing it.

In this position the float edge should be parallel with the float chamber sealing surface (see figure).

If the float height does not correspond to the nominal value, check the float needle valve and if necessary replace it.

If the needle valve is in working order, adjust the float height by bending float lever 1.

Assemble the carburettor tank, assemble the carburettor and check idling.
FRONT BRAKE

CHECK THE LEVEL OF THE FRONT BRAKE FLUID

Check the level of the brake fluid through sight A. The level of the fluid should never fall below the mark in the sight.

RESTORING THE LEVEL OF THE FRONT BRAKE FLUID

To restore the level of the brake fluid, loosen the two screws 1, lift cap 2 and add brake fluid until its level is 5 mm below the upper rim of the reservoir.

Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

WARNING:
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
BLEEDING THE FRONT BRAKE

To bleed air from the front brake circuit, proceed as follows:
• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the brake lever 2/3 times and keep the lever pressed.
• Unscrew the valve and let the oil drain.
• If are still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the brake pump thank to replace the oil that is out flowing.
• Remove the tube.
• Replace the rubber cap.
• Close the oil reservoir cap.
Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

WARNING:
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing.
If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.
If liquid is swallowed, contact a doctor immediately.
FRONT BRAKE LINING CONTROL

In order to verify the wear condition of front brake is enough to view the caliper from the bottom, where is possible to glimpse the brake lining tails which will have to show a brake of 2 mm in thickness. If the stratum is lesser let’s start replacing them.

Note:
Perform the check according to the times shown in the table on page 75.

To replace, contact authorised Betamotor customer service.

BRAKE DISC THICKNESS CONTROL

Periodically verify disc condition. In case signs of damage, veins, or deformations are present, proceed with replacement. Verify disc thickness. The minimum thickness is engraved on the disc. Once the limit is in proximity or has been reached, proceed with brake disc replacement. For replacement, contact an authorised Betamotor after-sales service centre.
REAR BRAKE

CHECK THE LEVEL OF THE REAR BRAKE FLUID

Check the level of the brake fluid through sight A. The level of the fluid should never fall below the mark in the sight.

RESTORING THE LEVEL OF THE REAR BRAKE FLUID

To restore the oil level, top up by means of oil filler cap 1.

Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

WARNING:
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

- Wear appropriate protective clothing and protection gloves.
- Keep coolant out of reach of children.
- WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:
  - with the eyes, rinse immediately with plenty of water and seek medical advice.
  - with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
BLEEDING THE REAR BRAKE

To bleed air from the rear brake circuit, proceed as follows:
• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the brake lever 2/3 times and keep the pedal pressed.
• Unscrew the valve and let the oil drain.
• If are still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the brake pump thank to replace the oil that is out flowing.
• Remove the tube.
• Replace the rubber cap.
• Close the oil reservoir cap.
Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

WARNING:
The brake fluid is extremely corrosive. Take care not to spill it on the paintwork.

Wear appropriate protective clothing and protection gloves.

Keep coolant out of reach of children.

WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing.
If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.
If liquid is swallowed, contact a doctor immediately.
**REAR BRAKE LINING CONTROL**

In order to verify the wear condition of rear brake is enough to view the caliper from above, where is possible to glimpse the brake lining tails which will have to show a brake of 2 mm in thickness. If the stratum is lesser let’s start replacing them.

Note:
Perform the check according to the times shown in the table on page 75.

To replace, contact authorised Betamotor customer service.

---

**BRAKE DISC THICKNESS CONTROL**

Periodically verify disc condition. In case signs of damage, veins, or deformations are present, proceed with replacement. Verify disc thickness. The minimum thickness is engraved on the disc. Once the limit is in proximity or has been reached, proceed with brake disc replacement.

For replacement, contact an authorised Betamotor after-sales service centre.
CLUTCH CONTROL
CHECK THE LEVEL
To check the oil level in the clutch pump, first remove cover 2.
Remove the two screws 1 and take off cover 1 together with the rubber bellows.
With the clutch pump in a horizontal position, the level of the oil should be 5 mm below the upper rim.
In the case where the level is lower than specified top up.
Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

Wear appropriate protective clothing and protection gloves.

⚠️ Keep coolant out of reach of children

⚠️ WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.
If liquid is swallowed, contact a doctor immediately.
BLEEDING
To bleed air from the clutch pump, proceed as follows:
• Remove the rubber cap 1 from the valve 2.
• Open the sump cap.
• Place one end of a small transparent tube into the valve 2, and the other end inside a container.
• Pump with the clutch lever 2/3 times and keep the lever pressed.
• Unscrew the valve and let the oil drain.
• If are still visible in the tube repeat above operation until obtaining a continuous outflow of oil within no air bubbles.
• Close the valve and release the lever.

NOTE:
During this procedure, continuously top up the pump tank to replace the liquid that is out flowing.
• Remove the tube.
• Replace the rubber cap.

Use the liquid indicated on page 16 in the “Recommended lubricants and liquids” table.

⚠️ WARNING:
The clutch fluid is extremely corrosive. Take care not to spill it on the paintwork.

⚠️ Wear appropriate protective clothing and protection gloves.

⚠️ Keep coolant out of reach of children.

⚠️ WARNING: Avoid any direct contact of the liquid with skin, eyes or clothing. If this happens:
- with the eyes, rinse immediately with plenty of water and seek medical advice.
- with skin, immediately clean contaminated areas with soap and water. Change clothing that is contaminated with liquid.

If liquid is swallowed, contact a doctor immediately.
CHECK AND ADJUSTING OF STEERING PLAY

Periodically check the play in the steering sleeve by moving the fork back and forth as shown in the figure. Whenever you feel play, adjust as described below:

- Loosen the screws 1
- Loosen the screw 2
- Reduce the play by turning nut 3

Tighten the screws to the prescribed torque values.

- 17Nm
- 20Nm
FRONT WHEEL TIGHTENING
Following removal of the wheel:
• Compress and release the fork 3-4 times.

• Tighten the wheel bolt and the screws of the foot-clip.
**FORK**

To maintenance refer at an authorized service center Betamotor.

To check the tightening torques see as shown in the figure.

**WARNING:**
Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.

**REAR SUSPENSION LEVERAGE**

In order to guarantee optimal operation and duration over time of the progressive leverage of the rear suspension, it is recommended to periodically check correct tightness of nuts and bolts.

Verify that suspension nuts and bolts are at the indicated torque.
TYRES

Only fit tyres approved by BETAMOTOR. Unsuitable tyres can adversely affect the road holding of the vehicle.
- To protect your safety, immediately replace any damaged tyres.
- Slick tyres adversely affect the road holding of the vehicle, especially on wet roads and in off-road riding.
- Insufficient pressure results in abnormal wear and overheating of the tyres.
- The front and rear tyres must have the same tread design.
- Always measure the inflating pressures when the tyres are cold.
- Keep the tyre pressures within the prescribed range.

CHAIN

Checking the drive chain periodically to ensure longer chain life. Always keep it lubricated and clean of deposited dirt.

Take special care in preventing the lubricant from coming into contact with the rear tyre or brake disc, otherwise the tyre grip and the action of the brake would be greatly reduced, making it very difficult to control the vehicle.

CHECK AND ADJUST TIGHTENING CHAIN

Position the drive on a flat base ensuring stability.

If the chain play exceeds 20 mm tension the chain.

- Loosen the pin 1.

20 mm
CHECK FOR CHAIN WEAR

Shift into neutral, pull up the upper stretch of the chain with a force of 10 - 15 kg (see figure). Measure the length of 18 links on the lower stretch of the chain. If the length is $\geq 272$ mm, replace the chain. Chains do not always wear evenly. For this reason it is important that the measurement is taken at different points along the chain.

When fitting a new chain, be sure to replace the chainring and sprocket as well. New chains wear more quickly if fitted on old and worn sprockets. After replacing the chain, adjust its tension as described on page 67.
HEADLIGHT

Keep the headlight glass clean at all times (see page 73).
Periodically check the correct angle of the light beam.

REPLACING THE HEADLIGHT BULBS

Remove the fixing screws and move forward the lamp holder front cowl.

Carefully remove the headlight bulb 1 together with lamp holder. To replace the high beam/low beam, lift the rubber cover 2, release connector, push on the spring 3 and remove the lamp holder and replace the light bulb with a new one. Be careful not to touch the bulb so as not to compromise its efficiency.

To refit, follow the procedure above but in reverse order.
Fasten the lamp holder front cowl to the supporting pins and fix it with the two elastics.

TAIL LIGHT

Keep the tail light glass clean at all times (see page 73).
The LED tail light is sealed. In the case of burnout of one or more LEDs it is necessary to replace the entire group.
To replace, contact authorised Betamotor customer service.
BATTERY

Battery is located under the saddle and requires no maintenance.

Keep the battery terminals clean. If necessary, protect them with a thin film of acid-free grease.

BATTERY REMOVAL AND ASSEMBLY

Remove the saddle (page 80).

Release the rubber band.

FIRST disconnect the negative connector (black) from negative (-) pole and THEN positive connector (black) from negative (+) pole.

Remove the battery.

When fitting the battery, insert it with the terminals as shown in picture.

FIRST connect the positive connector (red) from positive (+) pole and then negative connector (black) from negative (-) pole.

Reattach the rubber band.

WARNING:

Exercise extreme caution if, for any reason, the electrolyte (sulphuric acid) should come out of the battery. The electrolyte can cause serious burns. In case of contact with the skin, rinse abundantly with water. Should the electrolyte come into contact with the eyes, rinse with water for at least 15 minutes and immediately seek medical attention.

Even though the battery is sealed, there is a possibility that explosive gases may leak out.

Keep sparks and open flames away from the battery.

Keep spent batteries out of the reach of children and dispose of them as prescribed by law.

Do not remove the protections.

When installing the battery, be sure to observe the polarity of the terminals.
INACTIVITY

If the vehicle is not going to be used for a long time, remove the battery and charge it every 15 days using a suitable charger.

Store the battery in a dry place at a temperature of 5 to 35°C and out of the reach of children.

CHARGING THE BATTERY

Using an open-circuit multimeter (10-12 hours after the activation), check that the voltage is greater than 12.6 V. If it is lower, it is advisable to recharge the battery.

Based on the type of charger available, charge the battery using either of the following procedures:

- Constant voltage (14.4÷15 V) - Charge the battery for about 12 hours. Check the voltage 10÷12 hours after the end of recharge as described above.
- Constant current: Charge battery at 0.5/0.8 A until the voltage between the terminals stabilizes at ~14.5 V.

WARNING:

The battery is sealed. When recharging it, do not remove the seal nor add any liquid.
**FUSES**

To access the fuse, remove the saddle (page 80).

In the case of blown fuse, the vehicle will not start/stop:

Three spare fuses comes with the kit accompanying the vehicle.

A blown fuse should only be replaced with another of the same type.

Should the new fuse also burn out when fitted, immediately contact a specialized BETAMOTOR dealer.
CLEANING THE VEHICLE

GENERAL PRECAUTIONS

∇ WARNING: Do not clean your vehicle with a high-pressure device with a strong jet of water. Excessive pressure can reach electrical components, connectors, flexible cables, bearings, etc and can damage or destroy them.

∇ WARNING: Wash motorbikes frequently with cold water that are used near the sea (salty air) and on roads subject to salt spreading in winter. Cover with a film of oil or silicone spray unpainted parts and the most exposed parts such as wheels, forks and swingarm. Do not treat rubber parts and brakes.

When cleaning, avoid direct exposure to sunlight.
Close off the exhaust system to prevent water from entering.
Avoid directing the jet of water onto the air filter box cover and the throttle body.

WASHING MODE
Use water jet to soften the dirt and mud accumulated on the paintwork, then remove them with a soft bodywork sponge soaked in water and shampoo. Subsequently rinse well with water, and dry with air and cloth or suede leather.

Detergents pollute water. Always wash the vehicle in areas equipped for collection and purification of the washing liquids.

AFTER WASHING
Proceed to the emptying of the filter box using the appropriate ventilation and drying.

After cleaning, ride a short distance until the engine reaches operating temperature.

∇ WARNING: braking effect is reduced with wet brakes. Operate the brakes cautiously to allow them to dry.

Push back the handlebar control covers, so that water can evaporate.

When the bike is completely dry and cooled down, lubricate all moving parts.

Treat all plastic and painted components with non-aggressive detergents or products that are specific for the care of the motorcycle.
PROLONGED INACTIVITY

A few simple operations should be performed to keep the vehicle in good condition whenever it is to remain inactive for a long period (e.g. during the winter):

- Thoroughly clean the vehicle.
- Reduce the tyre pressures by approximately 30 percent, and if possible raise the tyres off the ground.
- Cover the unpainted parts, excepting the brakes and the rubber parts, with a film of oil or spray silicone.
- Remove the battery and keep it in a dry place. Charge the battery every 15 days.
- Protect the vehicle with a dust cover.

AFTER PROLONGED INACTIVITY

- Reinstall the battery.
- Restore the tyre inflating pressures.
- Check the tightening of all the screws having an important mechanical function.

**WARNING:**
Tightening of the screws should be carried out by adjusting the torque wrench to the stability torque with repeated tightening until stability torque has been achieved.
CHAPTER 5 REPLACEMENTS

CONTENTS
Removal and refitting of the saddle................................................................. 80
Removing and installing air filter cover panel.............................................. 81
REMOVAL AND REFITTING OF THE SADDLE

Press button 1.

Remove the saddle towards the rear of the motorcycle.

To re-assemble insert the cavity 1 of the saddle in slot 2.

Press the saddle down in the middle and at the same time, push it forwards until the bayonet joint engages in its seat.
WARNING
Make sure the bayonet joint 3 is firmly inserted into the button lock.

REMOVING AND INSTALLING AIR FILTER COVER PANEL

Remove the saddle (page 80).

Grab the side panel in the front side and pull out.

To refit insert the tabs 1 into their slots.

Slide the side panel toward the vehicle.
