

Bulletproof Front Disc Guard

Part# AB-21145, AB-21155

AB-21145 Fits: pre-2019 RR, RS & RR-S Models

AB-21155 Fits: 2019+ RR, & RR-S Models

Installation Instructions:

The Bulletproof Front Disc Guard Kit includes:

1 - Billet aluminum front Disc Guard

1 - 50mm lower-brake caliper mount bolt (for 2019+ models only)

Tools: Torque wrench, 24mm & 10mm sockets, 6mm allen wrench

1. Remove the left 24mm aluminum front axle nut, being careful not to round off its narrow shoulder.

2. Placing a paper towel over the nut will prevent it from being gouged by the steel socket.

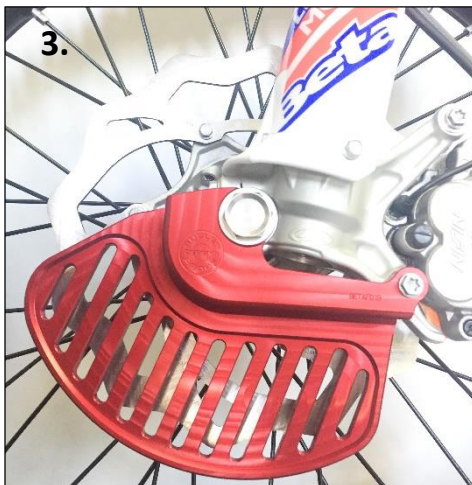

3. Remove the lower brake-caliper 10mm mount bolt, cleaning out any remaining thread locker from the caliper's inner threads.

4. Wipe off any dirt or debris from the axle nut threads & caliper mount threads, & mount facings, as in fig 2.

5. Fit the disc guard to the lower fork lug, thread in the axle nut.

6. 2018 & earlier forks use the stock caliper mount bolt & washer.

7. 2019+ forks use the longer 50mm caliper mount bolt & washer.

8. Apply a small amount of medium (blue) thread locker to the brake caliper mount bolt.

9. Torque front axle nut to 50nm, torque caliper mount bolt to 35nm.

10. Marking these mounting fasteners afterwards with a sharpie provides a quick way to check for correct torque.
