

Beta Evo Billet Gas Cap

Part# AB-80175

For: 2018 Evo Trials

Installation Instructions, read entire instructions page before beginning:

Tools needed: Small blade screwdriver & a bench vise.

Note: On some 2018 Evo trials bikes, the stock plastic gas cap can swell & make it difficult to remove.

1. Remove stock Evo gas cap, then remove the cap's large o-ring to re-use it on the new cap.
2. Use a small blade 2-4mm-tip screwdriver & insert the blade between the yellow breather valve & around the side-walls of the cap to gently loosen & remove it.
3. Keep working the screwdriver blade around the gap between the yellow breather & the stock cap in order to push the yellow valve inwards & upwards & loosen it.
4. After removing the breather valve, place it into the new billet cap, being sure to center it first.
5. A bench vise or large channel locks helps to push the breather into the billet cap, Fig 3.
6. A 17mm socket is helpful in the bench vise to center & push against the narrow end of the breather.
7. Install the stock gas cap's o-ring just above the screw threads, the larger o-ring sits just below the knurled area, both shown in Fig 3.
8. Install the billet gas cap with both o-rings as shown & tighten snugly.
